Message

I am very glad to learn that Socio-Economic and Demographic Report based on Population and Housing Census 2011 and post census large scale sample survey (Sample Census) is being published by Bangladesh Bureau of Statistics (BBS). This report is one of the five National Reports to be published by the BBS.

The results of Sample Survey are furnished in the Socio-Economic and Demographic Report in order to facilitate the users about the Socio-Economic and Demographic data at various levels. I believe that the data presented in the report will provide quality benchmark database to policy makers, planners, researchers, administrators, development partners and other agencies for formulating and implementing their plans and programs for overall development of the country. I also believe that this report will be helpful for all users both at home and abroad.

The dedicated efforts of personnel employed in census undertakings have tremendously helped for the success of census. Moreover, the participation of people at large also played a vital role in this operation. I deeply acknowledge the active participation and commendable cooperation of the public representatives of the government and non-government organizations, district and field administration, different local government bodies, print and electronic media of the country for making the Census possible. I also express my gratitude to the European Union (EU), US Census Bureau, U.S. Agency for International Development (USAID) and United Nations Population Fund (UNFPA) for their financial and technical support for completing this huge task.

I express my deepest gratitude to the Secretary, Statistics and Informatics Division (SID) for his whole-hearted Guidance and Direction to implement the census. Finally, I like to thank the Director General, BBS and all other officials of SID and BBS who are involved in the efforts and bringing out this report.

Message

I am happy to know that the Socio-Economic and Demographic Report based on Sample Census 2011 is going to be published by Bangladesh Bureau of Statistics (BBS). The Socio-Economic and Demographic Report is one of the five National Reports being published by the BBS on the basis of main census and the Sample Census (Long Questionnaire sample survey).

I believe that the data presented in the report will provide quality benchmark database to public representatives, policy makers, planners, researchers, administrators, development partners and other government and non-government agencies for formulating and implementing their plans and programs. This will also help in prioritization of resource allocation according to population density and other socio-economic characteristics of the population.

I express my heartfelt gratitude to the Secretary, Statistics and Informatics Division (SID) for his effective guidance and cooperation to implement the census operation. Finally, I like to thank the Director General, BBS and all other officials of SID and BBS who actively helped in implementing the census activities, processing of census data and preparation of this report.

M.A. Mannan, MP

Secretary
Statistics and Informatics Division (SID)
Ministry of Planning
Government of the People's Republic of Bangladesh

Foreword

Population Census is indeed the only recognized and reliable data source in Bangladesh on size, spatial distribution and all basic characteristics of population from national level down to village level. Bangladesh Bureau of Statistics (BBS) had conducted the fifth Population and Housing Census 2011 during the period of March 15-19, 2011 starting at the zero hour of 15 March, 2011. After the main census a large scale sample survey (Long questionnaire survey) was conducted in October, 2011.Socio-Economic and Demographic Report is one of the five National Reports. This report is based on sample survey 2011.

I believe that the data presented in this report will provide a benchmark database to policy makers, planners, researchers, administrators, development partners and other agencies for formulating and implementing their plans and programs for overall development of the country. I firmly believe that this report will be helpful for all users both at home and abroad.

I deeply acknowledge the active participation and commendable cooperation of all the government and non-government organizations, district and field level administration, different local government bodies, print and electronic media of the country for making the Census possible. I also express my gratitude to the European Union (EU), US Census Bureau, U.S. Agency for International Development (USAID) and United Nations Population Fund (UNFPA) for their financial and technical assistance for completing this colossal task. I express my heartfelt gratitude to AHM Mustafa Kamal, FCA, MP, Honorable Minister, Ministry of Planning for his effective guidance and significant cooperation throughout the Census operation. We are also grateful to the respected Cabinet Secretary and the Senior Secretary, Ministry of Public Administration for their active cooperation.

The Population and Housing Census 2011 had made best use of the modern IT technology. In order to minimize time and human resources, modern technology like ICR (Intelligent Character Recognition) machines and iCADE (Integrated Computer Assisted Data Entry) system were used in capturing the census data. CSPro software was used in analyzing and processing of data. I express my sincere thanks to Director General and Deputy Director General, BBS, Project Director, Population and Housing Census 2011, members of the Steering Committee, Editors' Forum, Project Directors' Forum and all other officers and staff members of BBS and consultants involved in the efforts and finally bringing out this report in time.

Preface

Bangladesh has a long tradition of conducting the population census on decennial basis since 1872. The fifth population census of Bangladesh and fifteenth in the region, following the decennial periodicity, was conducted during March 15-19, 2011. The main objective of the census was to collect information on the basic characteristics related to housing, households and population for developing a comprehensive database for all development planning and policy making.

Population and Housing Census 2011 was conducted in three phases. In the First Phase, basic data about all households and individual members of the households were collected through ICR formatted questionnaire during March 15-19, 2011. In the Second Phase, quality and coverage of the main count were verified through a Post Enumeration Check (PEC) survey during April 10-14, 2011. For the first time in the census history of Bangladesh, PEC was conducted by an independent organization, namely, Bangladesh Institute of Development Studies (BIDS). In the Third Phase, detailed socio-economic information was collected by administering a long machine readable questionnaire in a sample survey held during October 15-25, 2011.

The preparatory works of the census was started by Bangladesh Bureau of Statistics from mid 2009 with updating maps and area Geo-codes. The preliminary checking on the census questionnaire was done in several times through field operation. The census questionnaire was pre-tested in selected areas with the participation of some experts of the "Technical Committee". The views of the users' and experts' were taken into consideration for finalizing the questionnaire. The census field operation and quality of census inputs were tested under two zonal operations. Accordingly the questionnaire was designed in machine readable format with the technical assistance of US Census Bureau and was printed with the financial assistance of European Union (EU) through the United Nations Population Fund (UNFPA).

The entire country was divided into 2,96,718 Enumeration Areas (EAs) with the help of enumeration area maps in order to ensure full coverage, effective management and close supervision. There was a supervisor for every 6 or 7 enumerators to supervise their works. The Geo-coding system developed in the previous Census was checked, edited and computerized for using in this census.

I express my heartfelt gratitude to the Honorable Minister for Planning for his effective guidance and cooperation in making this sample survey a success. I express my deepest gratitude to Secretary, Statistics and Informatics Division (SID) for her whole-hearted support and cooperation. Moreover, members of Steering Committee, Standing Technical Committee, Consultants and the participants of the Seminar-cum-Expert Consultation for their valuable contributions for finalizing the questionnaire. I am thankful to all members of the sub-committees on publicity, sampling and report writing for their valuable contribution. I am also thankful to our mass media, local bodies and the people at all level for their whole-hearted supports. Special thanks are due to Professor Barkat-e-Khuda, Department of Economics, University of Dhaka, Dr. Sadananda Mitra, Ex. Gender & Statistics Advisor, UNDP and Mr. Md. Shamsul Alam, Consultant, Population and Housing Census 2011 Project for review of this report and analytical improvement of it.

Finally, I thank Deputy Director General, BBS, Project Director, Population and Housing Census 2011 Project, members of the Technical Committee, Editors' Forum, Project Directors' Forum and other officers and staff members of BBS and local consultants who vigorously helped in implementing the survey activities and processing the data with their relentless efforts to make the sample survey a success and bringing out this report within a very shortest possible time.

CHAPTER - 1

Introductory Notes and Definitions

1.1 Background

The fifth Population and Housing Census of Bangladesh was conducted during March 15-19, 2011 and the Sample Census, i.e., Socio-Economic and Demographic Survey was conducted during October 15-25, 2011. Generally the Sample Survey is conducted with a short gap after the census with a view to supplementing the data support to the census because the census information and data on population are collected with a short questionnaire where population and other important questions are kept on priority basis on the national issues for the government planning and policy formulation. In the subsequent survey, a long questionnaire was used to collect the information for various purposes, especially to fill up the data gap on the current socio-economic condition and to assess the demographic status of population in the country. Some other basic information on housing, health, sanitation, electricity, sources of drinking water, etc. relevant for policy formulation was also included in the questionnaire.

1.2 Concepts and Definitions

As this survey is a supplement to the main census, almost all the definitions of technical and statistical terms of the census have been used and defined as usual in this report. In spite of that, there are some other points apart from the definitions those need to be made clear. There may be difference between the survey estimates and census results. With a view to making comparison among variables and to define the relations and fluctuations, both the census results and survey estimates have been presented together in tables for better analysis. However, data references for both the findings are not equally comparable due to inner data-weights and from the methodological point of view. The census is a total count of population parameter. On the other hand, survey provides blown up estimates from the sample. The post census sample survey conducted in Bangladesh using a long questionnaire to supplement the main census is basically a big sample survey properly known as sample census.

1.3 Objectives of Survey

The Household based Sample Survey is a basic and suitable method of data collection for population and socio-economic and demographic statistics. Therefore, the socio-economic and demographic survey has always been conducted at a time close to the completion of census. On many occasions, the survey is complementary to the census and provides supplementary data for the census to fill up the data gap, especially on the housing, health and population. The survey has some definite objectives which are described below:

- Collecting information on household and housing status;
- Providing data on household structural composition, relationship, size and the headship;
- Obtaining data on age pattern, sex and demographic characteristics by gender issues;
- Collecting information on public utilities such as water supply and sanitation, electricity connection etc. and
- Generating data on occupation and other socio-economic activities involved to household.

1.4 Questionnaire and Reference Period

A four pages long sample survey questionnaire in modular form was designed and a total of 81 questions in 10 separate modules were incorporated. The sample survey was conducted during October 15-25, 2011. The BBS officials were the supervisors and the hired females were the interviewers. Data were collected from the heads of households or reliable respondents of the households. A total of 25 sample households per enumeration area were covered within 10 days by

3360 female interviewers deployed all over the country who were supervised by 840 BBS officials with a proper chain of command under the guidance of the Director General of BBS. The 10 (ten) separate modules of the sample questionnaire were as follow:

Modules

1) Identification and Household Summary
2) Housing
3) Household
4) Individual Information
5) Economic Activities
6) Nuptiality
7) Fertility
8) Members Returned from Abroad
9) International Migration
10) Death

1.5 Statistical/Technical Terms and Definitions

The definitions and terms used in the survey are similar to census to facilitate comparison among similar variables.

Household: A group of persons, related or unrelated, living together and taking food from the same cooking pot.

Slum Household: Slum household is a dwelling household in the slum area. The housing structure of which is made of with the least cost materials and is built very temporary basis. The uprooted and floating poor, labourers, peddlers (hawkers) are the members of slum households. Slums are seen mainly in the towns/cities beside the main roads/highways or nearby mills/factories/small scale industries, railway stations/junctions, or beside the railway line, near the market places, etc. or even on the government abandoned land/properties.

Enumeration Area: An enumeration area means a well-defined and specified area of enumeration assigned to an enumerator. A map of this area is prepared showing boundaries and locations. An enumeration area may consist of taking several households. A mauza can be divided into several enumeration areas. In the sample survey 2011 an enumeration area was comprised of 25 households.

Establishment: The basic unit of economic activity is called establishment. It is usually a combination of both activities and resources under a single ownership and location.

Literacy: Person who is able to write a simple letter is defined as literate.

Educational Attainment: Educational attainment is defined as the highest grade completed within in the educational system of the country where the education is received. It is not the number of years spent at school which is counted, but rather the highest grade or level completed in the regular school system. The term “completed” means the successful completion of a given grade or level of education of schooling years.

School Enrolment: The school enrolment is a ratio of total pupils (students) registered or enrolled to the school age population expressed in percentage.

Attendance Ratio: Attendance ratio is the ratio of pupils actually in attendance to pupils enrolled expressed in percentage.

Sex Ratio: The ratio of males to females in a given population usually expressed as the number of males per 100 females.

Growth Rate: The growth rate is the ratio of annual change to a number compared to the past expressed in percentage term. This rate of change may be positive or negative. In this report the growth has been calculated using the following annual compounding formula:

$P_n = P_0 (1 + r)^t$

Where,

P_n = Current population,

P_0 = Previous population,

r = Annual population growth rate,

t = Time period between the preceding and the subsequent.

Economic Participation: Economic participation means the participation of population in the economic activities. Basically it indicates the economically active population or labour force which is comprised of all persons of either sex who contribute to the supply of labour for the production of economic goods and services during the time-reference period chosen to the survey. It includes employed and unemployed population. Employed population currently may be at work or may not be at work for time-being. Unemployed population are persons capable of working and looking for work. They are all included in the labour force.

Working Population: Working population include persons currently at work and those looking for work and excludes persons not at work.

Crude Activity Rate: The crude activity rate as followed in all censuses is defined as the ratio of economically active population in the age group 10 years and over to the total population expressed in percentage.

Refined Activity Rate: The refined activity rate as followed in all censuses is the ratio of economically active population in the age group 10 years and over to total population of the same age group expressed in percentage.

Self Employed: A person/persons who operates/operate an enterprise or business on his/her own account or operates/operate jointly with others in the form of partnership. A self-employed person may or may not hire workers to assist him/her in his/her enterprise.

Employer: An employer is a self-employed person who operates his or her own economic enterprise or engages independently in a profession or trade and hires one or more persons for his/her economic institution or in a dwelling house where he/she himself/herself participates actively.

Unpaid Family Helper/Worker: A person who works a without pay in a family or in an operated farm or business owned or operated by the head of household or by any other member of the household to whom they are related by kinship, marriage, adoption or dependency.

Employee: A person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates or pay in kind.

Unemployed: The unemployed consists of all persons who, during the reference period, are not at work but who are seeking work for pay or profit including the person who never worked before. Also, included are those persons who, during the reference period, a were not seeking work because of temporary illness. They have made arrangements to start a new job subsequent to the reference period or they were on temporary or indefinite lay-off without pay.

Household Work: Persons engaged in activities or various types of housework or domestic type of work at home other than economic activities, such as cooking, washing, taking care of household members, children, etc. are considered as household work. Either male or female may engage himself/herself in household work.

Singulate Mean Age at Marriage (SMAM): SMAM is defined as an estimate of the mean number of years lived by cohort of women before their first marriage. This is an indices method of estimation for the mean age at marriage.

Crude Divorce Rate: It is the number of divorces per 1000 population.

Median Age: Median age is the middle most age with half of the population lying above and the other half lying below the age.

Dependency Ratio: Dependency ratio has been defined as the ratio of sum of population aged 0-14 years and 60+ years to the population aged 15-59 years expressed as percentage.

Infant: Infant refers to a baby who has not yet reached in his/her first birth day and is shown age 0 or under 1 year.

Child- Woman Ratio (CWR): The ratio of children under five (0-4) years of old to women of ages 15-49 is often called the child-women ratio. This is commonly expressed per 1000 population.

Crude Birth Rate (CBR): The ratio of live births in a specified period (usually one calendar year) to the average population in that period (normally taken to be the mid-year population). The value is conventionally expressed per 1000 population.

Age-Specific Fertility Rate (ASFR): Number of live births occurring to women of a particular age or age group normally expressed per 1000 women in the same age- group in a given year. It is usually calculated for 5 years age groups from 15-19 to 40-44 or 15-19 to 45-49.

Total Fertility Rate (TFR): The sum of the Age-Specific Fertility Rates (ASFR) over the whole range of reproductive ages for a particular period (usually a year). It can be interpreted as the number of children a woman would have during her lifetime if she were to experience the fertility rates of period at each age.

General Fertility Rate (GFR): The GFR is the ratio of total number of children born alive per woman to the total number of women of ages 15-49 expressed per 1000 population.

Crude Death Rate (CDR): The crude death rate (CDR) is the number of deaths per 1000 mid-year population in a given year.

Infant Mortality Rate (IMR): The number of deaths occurring during a given year among the live-born infants who have not reached their first birthday divided by the number of live births in the given year. It is usually expressed per 1000 live births.

Natural Growth Rate (NGR): The natural growth rate is the difference between crude birth rate (CBR) and crude death rate (CDR) expressed in percentage.

Crude Marriage Rate (CMR): CMR is the ratio of marriages in a given year to the mid-year population of that year.

Migration: Migration is defined in this survey as the movement of persons who change their place of residence, except for marriage, for a period of six months or more. The time period for the migration due to marriage is not fixed.

Migration Rate (MR): The in or out migration rate is defined as the number of in or out migration per 1000 mid-year population of a particular area for a specified time interval.

1.6 Some Other Concepts and Terms Used in the Survey

In this survey report there are some other concepts and terms used in several sections of the technical analysis. Even in some common terms need to clarify as they are similar to other and are used to express the specific meaning. For example, “cohort” is a demographic common term which is used to explain the observations of some different demographic phenomena. It often yields the useful clues to estimate the magnitude of changes taking place in a cohort analysis and to infer social and economic implications of those changes occurring in a cohort over time. Thus, the concept of cohort plays an important role for analytical and other observations of the population. In the survey many other concepts/terms are used and these are defined in turn.

Main Occupation: Occupation refers to the kind of work done during the time-reference period established for data on economic characteristics by the person employed (or performed previously by the unemployed). The head of household or other household members may engage himself/herself in more than one activity to earn more for economic solvency or to support the insufficient principal income. In the sense the survey questionnaire is put forth to inquiry about the main occupation and

other subsidiary occupations. Main occupation is defined as the job mainly done by the member in exchange of which he/she gets some benefits either in cash or in kind for livelihood.

Subsidiary Occupation: If a member is engaged in more than one occupation, the occupation other than the main occupation is considered as subsidiary occupation. It is also called the secondary source of income.

Type of Industry: Industry refers to the activity of the establishment in which an economically active person worked during the time-reference period established for data on economic characteristics or last worked, if employed. The survey covers all types of industries or establishments in which persons were engaged in producing or distributing goods and services during the reference period.

Death: Death is the permanent disappearance of a member from all evidences of life at any time after live birth has taken place. But death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, the death is indicated by the fact that after such separation the foetal does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Such foetal death is not considered in the survey as it is very difficult to identify.

Age at Death: Age in complete years at the time of death is defined as age at death. In case, age is less than one year, age is recorded in number of complete months and any death at age below 1 year is called neonatal death.

Duration of Marriage: Duration of marriage is the time during which marriage lasted or continued.

Live Birth: Live birth refers to the births occurred after pregnancy and shows signs of life such as crying, breathing etc.

Crude Separation Rate: Crude Separation Rate is a relative number of separations per 1000 population.

Internal Migration: Migration that takes place between the regions within the country.

Enrollment Rates: Percentage of children 6-10 years of age enrolled in primary schools. The figures represent net enrollment rates. The age is assessed using an events calendar. Children following the Primary School or Madrasa Text Book Board are considered.

Ownership: This refers to the ownership of the unit and not the ownership of the building or structure in which it may operate. Ownership may be government, semi government, private, foreign or co-operative. In case of mixed ownership, enumerators are instructed to record the major ownership type.

Employed Person: Employed person is a person who is either working one or more hours for pay or profit or working without pay on family farm or enterprise or organization during the reference period or found not working but has a job or business from which he/she is temporarily absent during the reference period.

Underemployment: Underemployment is the condition whereby a person's employment is considered inadequate in terms of time worked, income earned, productivity or use of his/her skills and the person is looking for additional work in conformity with his/her education or skill to augment income.

Index of Ageing: Index of ageing is the ratio of old persons of age 60 years and above to the young population of age 0-14 years expressed as percentage.

Non-economic Activity: It means the household activities that have no economic values like cooking, cleaning and washing, looking after the younger brothers/sisters and/or children etc.

1.7 Sample Design

To conduct the sample survey, 2011 a “stratified two-stage cluster sampling” was followed in sample deign. It was a self-weighted realistic design. People living in households were the target population.

1.8 Stratification

Two-way stratification had been made to isolate homogeneous groups. The first level stratification was done by locally and divided into the three strata:

i) City Corporation Area;

ii) Urban Area and

iii) Rural Area.

1.9 Tabulation Plan

In order to meet the data requirements of the users an intensive tabulation plan was prepared with the help of US Census Bureau Team. As there were ten (10) modules in the questionnaire, separate tabulation plan on each module was considered.

1.10 Pre-test of the Questionnaire

The contents of Sample Survey questionnaire were determined based on data needs assessed on government current priorities and also recommendations of technical committee of experts. Several preliminary checks of the questionnaire were made locally. Lastly, the questionnaire was pre-tested in selected areas with participation of some experts of the technical committee. Satisfactory pre-test results were resolved finalising a ten moulded questionnaire for adoption in the survey. Accordingly the questionnaire was designed in machine readable format with the technical assistance from US Census Bureau and was printed abroad with the financial assistance from European Union (EU) through United Nations Population Fund (UNFPA).

1.11 Selection of Sample Units

A total of 6,720 sample EAs were selected following the predesigned allocation procedures depending on the frame of Population and Housing Census 2011. The covered area was entire Bangladesh. The sampling design was a two-stage cluster sampling with Enumeration Areas (EAs) being the first stage sampling units and households being the second stage units for each of the strata.

1.12 Field Organisation

For smooth conduct of the sample survey, the whole country was divided into 23 regions, 64 Zilas (Districts) and 840 supervisors' areas to enumerate 6720 sample EAs. Secretary, Statistics and Informatics Division was the Chief Census Coordinator, the Director General of BBS was the National Coordinator and the Deputy Director General of BBS and the Joint Secretary, Statistics and Informatics Division were the Deputy National Coordinators. The Zilas were under the control of District Census Coordinators (DCCs). DCCs were the Officials of BBS. Most of the DCCs were sent from the headquarters except 23 DCCs who were Officers in charge of 23 Regional Statistical Offices of BBS. In the City Corporation Areas, additional DCCs were deployed according to the number of EAs and responsibilities. In the sample survey, DCCs were responsible for imparting training, distribution of materials to the field staffs and receiving back the filled-in and submitting those to the head office and to meet other problems in the field. Among 840 supervisors, 483 worked as Upazila Census Coordinators (UCCs) cum supervisors who were Upazila Statistical Officers/Assistant Statistical Officers of BBS. All the 3360 enumerators were appointed from unemployed educated local females who did well as the enumerator in the Population and Housing Census 2011 conducted in 15-19, March 2011. In the selection process, preferences were given to unemployed females and almost all the enumerators were females. The enumerators were given honoraria and training allowances.

1.13 Training

A verbatim training manual was prepared for uniform training at all stages. There were two stages of training. In the first stage, all District Census Coordinators (DCCs) were trained at the headquarters who acted as master trainer for the second stage. A 3 days training was imparted for the District Census Coordinators (DCCs) in Dhaka headquarters. In the second stage, DDCs imparted training to the supervisors and enumerators. A 5-day long training was imparted to the supervisors and

enumerators. The training manuals were made available to the supervisors and enumerators before the training. In all the stages of training, class room training were followed by field trip and mock training.

1.14 Enumeration

Enumeration was done during 15-25 October, 2011. The reference night was the night following 14th October, 2011. The enumeration was done following the ***De jure*** Method.

1.15 Identification of Enumeration Area

The EA boundaries were shown to the enumerators with the help of mauza map and also with the list of sample households supplied to them. This was mainly done by the supervisors and Upazila Census Coordinators (UCCs).

1.16 Collection of Filed in Questionnaires

The filled in schedules and documents were collected by the Census Zila Coordinators with the help of supervisors and submitted to the control room at the headquarters.

1.17 Control Room

During the field operation (starting from field training to return of documents) control rooms were operated at the headquarters and also in all regional offices. These control rooms were kept open from 8.00 A.M. to 9.00 P.M. even on holidays. All the regional offices were directly linked with telephone lines. Any problem that occurred in the field was reported to the headquarters and necessary steps were immediately taken to solve the problems.

1.18 Inventory of Documents

All the documents collected by the District Census Coordinators (DCCs) at field level were returned to the headquarters by them as per schedule. The filled-in questionnaires were stored systematically by Zila and by upazila.

1.19 Data Capturing/Processing

The adoption of Intelligence Character Recognition (ICR) strategy was planned for Sample Survey data capturing. As such, ICR machines were used. BBS had gathered experience in OMR and OCR techniques for data capturing from earlier censuses and surveys of 1981, 1991 and 2001. The ICR technology was used in this Sample Survey of BBS. US Census Bureau supported BBS in using **CapturePro** and **iCADE** (Integrated Computer Assisted Data Entry) system and software for data capturing. **CSPro** software was used for analyzing and tabulating Sample Survey data. The tabulations were made on the basis of pre-determined tabulation plan. Tabulated data were analyzed and checked for any inconsistency before finalization.

1.20 Editing

In order to process the Sample Survey data, editing of the modules were done in an efficient computer edit and imputation program. The errors and inconsistencies, if detected, were imputed by applying both 'hot-deck' and 'cold-deck' methods through CSPro software. For this purpose, written editing instructions, code list for occupation, 2-digit code of Bangladesh Standard Classification of Occupation (BSCO) and for activity code lists, 2-digit code of Bangladesh Standard Industrial Classification (BSIC), the Bangladesh Version of International classifications were used.

CHAPTER - 2

Sample Design

2.1 Introduction

The United Nations describes census as the total process of collecting, compiling and publishing demographic, economic and social data pertaining at a specified time or times to all persons in a country or delimited territory. It is necessary, since the findings are not only for sake of generating information on various indicators for research and academic purpose, but also quite importantly, to provide relevant information for purpose of policy formulation and planning. Population Census is the primary source of basic national population data required for administrative purposes and for many aspects of economic and social research and planning. For countries with big population like Bangladesh, census becomes gigantic. As the demand for data on almost every aspect of the social and economic status of a country's population increases, the process becomes more and more exhaustive. Censuses are usually sought to get comparable information in a fixed sequence on social and living conditions of people of various region, religion, community, gender, age, educational status etc. Data on many indicators like sex ratio, education level and income, fertility rate, mortality rate, ratio of working women and men, number of disabled persons etc. are of primary interest of various government and non-government sectors. However, incorporating too many dimensions in the census could possibly make the endeavor too complicated, expensive and time consuming as well as affective the quality of data. That is why almost every country plans a survey with a detailed long questionnaire soon after completing the census. This survey is often termed as the Sample Census.

The fifth Population and Housing Census of Bangladesh began from the midnight of 14 March, 2011 (Monday). The total number of people living in the country had been enumerated, together with collection of data on their age, sex, ethnicity, religion and social and economic status. As usual the census is planned to be followed by a long questionnaire survey. The long questionnaire survey is required to be technically very sound so that it can be advantageously utilized to upgrade and enhance the census data by appropriate supplementation, synchronization and matching. The sampling methodology for this planned survey is described in this document.

2.2 Sampling Design

The sampling design in this case is taken as a stratified two-stage cluster sampling method where at the first stage EAs (Enumeration Area having about 100-120 households each, were created all over the country and GIS Maps were developed for each EA prior to the census) are selected and within the selected EA, households listed in the 2011 census are selected at the second stage.

2.3 Stratification

Since estimation is required for the Zila delineation without segregating for rural, urban and metropolitan region, primarily, the whole country is divided into 64 strata each defined as the administrative zilas. At the national and divisional levels the estimation is required to be segregated for rural, urban and city corporation regions. The Zila sample will- therefore, consisted of both rural and urban region. In addition, for estimation at the city corporation level, six additional strata were defined as the six city corporations. There were six city corporations strata, 64 zilas strata making a total of 70 (6+64) strata in the population. Independent sampling was done within each stratum. This stratification resulted in the list of strata given in the Table 2.

2.4 Sample size

From general theory the minimum required sample size is determined by the usual sample size determination formula for estimating proportion, which is given by:

$$n = \frac{n_0}{1+\frac{n_0}{N}} \times \text{deff} \quad \text{..... (1)}$$

With $$n_0 = \frac{p(1-p)z^2_{\frac{\alpha}{2}}}{d^2} \quad \text{..... (2)}$$

Where, p is an apriori proportion of the required characteristics in the population, $z^2_{\frac{\alpha}{2}}$, the value of the standard normal variate allowing 100α% probability of bad samples, *d*, the allowable margin of error, *N* is the population size and deff is the design effect used for complex surveys using multi-stage cluster sampling.

Conventionally α can be taken as 0.05 and **deff** can be taken as 1.5 - 2.0 for most socio-economic surveys in Bangladesh. Theoretically, an apriori *p*=0.5 gives the safest sample size since *p(1-p)* takes the highest value for *p*=0.5. A common choice for the value of the allowable margin of error is *d*=0.05. This value does not seem to be realistic for scenario where the true value of *p* is outside the range $0.2 \le p \le 0.8$ when a smaller value for d or consideration of a relative error margin is recommended. The equation (1) is used to revise the sample size and equation (2) for the population size *N*. It is observed in the theory that for $N \ge 8000$, equation (2) is not much influenced or improved. That is why, equation (2) is straight forwardly used for large population sizes and there is no necessity for increasing the sample size for population becoming any larger. In this particular study under interest, the minimum number of household required in each stratum will be focused and since the number of household in each of the defined strata is fairly larger than 8000, no adjustment for population size will be suggested. The conventional choice of α=0.05 will be considered which would give $Z_{\alpha/2}$=1.96. For safer sample size design effect will be chosen as deff=2.

The main concern for sample size determination of this sample census will be to make choices of the values of *p* and *d* because a diverse range of variables will be under study. Previous estimates of the proportions for these variables are seen to vary from *p*=0.003 (for MMR) to *p*=0.097 (for access to drinking water) and hence taking a nominal choice of *d*=0.05 would not serve the cause. It will be needed to determine the sample size by keeping the rare variables in mind and also by choosing a moderately small value of *d*. To allow a maximum error of ± 25% (*d=0.0125*) in estimating a characteristic as rare as 5% (*p=0.05)*, the minimum required sample size can be obtained to be approximately 2335 Household per stratum. This sample size will allow a narrower margin of error for estimating characteristics which are more common in nature and also for estimation for larger delineations. Table 1 and Figure 1 can illustrate the amount of allowable margin of error achievable for different type of estimations.

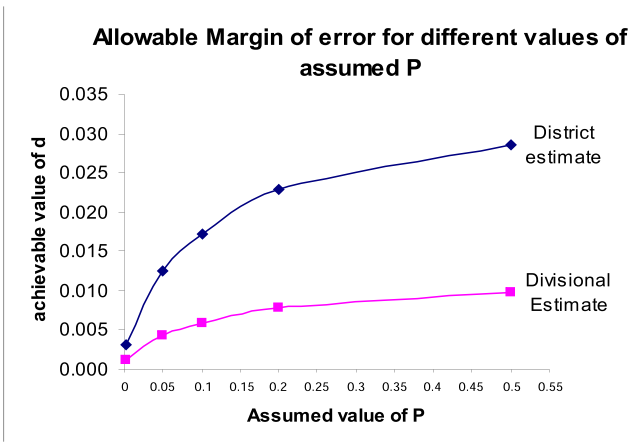

Figure 1: Comparison of Allowable margin of error achievable for estimations for different delineations (assuming average division size)

Table 1: Allowable Margin of Error Achievable for Different Type of Estimations for each Division

Items	Some Key Characteristics					
	Maternal Mortality Rate per HH per year	Access to Mass Media	Crude Birth Rate	Disability	Adult Literacy Rate	Population with access to improved water source
Previous estimate of Proportion	0.003	0.005	0.021	0.16	0.496	0.973
Achievable Margin of Error (d)						
Estimate from each Zila	0.003	0.004	0.008	0.021	0.028	0.009
Estimate for Barisal Division	0.001	0.002	0.003	0.008	0.011	0.003
Estimate for Chittagong Division	0.001	0.001	0.002	0.005	0.008	0.003
Estimate for Dhaka Division	0.001	0.001	0.002	0.004	0.007	0.002
Estimate for Khulna Division	0.001	0.001	0.002	0.005	0.009	0.003
Estimate for Rajshahi Division	0.001	0.001	0.002	0.005	0.009	0.003
Estimate for Sylhet Division	0.001	0.002	0.004	0.008	0.013	0.004
City Corporation estimate	0.001	0.002	0.003	0.007	0.012	0.004
Urban estimate	0.001	0.001	0.002	0.004	0.007	0.002
Rural estimate	0.000	0.001	0.001	0.002	0.004	0.004

2.5 Allocation of Sample Size

Since individual stratum estimation is required and the sample size is determined to address the minimum requirement which need not be inflated for population size. There will be no need for using any proportional allocation. From each stratum minimum 2335 households are to be drawn. Looking at the number of household in individual EAs, we plan a second stage sample of 25 households from each selected EA. Approximately 96 EAs are to be selected from each stratum resulting a slight adjustment of the sample size to 2400 households per stratum. Table 3 produces the sample size allocation among strata.

Table 2: The Allocation of Sample Size among Strata

Sl. No.	Zila Code	Name of Zila	Rural		Urban		Total	
			No. of EAs	No. of HHs	No. of EAs	No. of HHs	No. of EAs	No. of HHs
1	04	Barguna	88	2200	8	200	96	2400
2	06	Barisal	91	2275	5	125	96	2400
3	06	Barisal (City Corporation)	-	-	-	-	96	2400
4	09	Bhola	90	2250	6	150	96	2400
5	42	Jhalokati	85	2125	11	275	96	2400
6	78	Patuakhali	89	2225	7	175	96	2400
7	79	Pirojpur	89	2225	7	175	96	2400
8	03	Bandarban	81	2025	15	375	96	2400
9	12	Brahmanbaria	87	2175	9	225	96	2400
10	13	Chandpur	81	2025	15	375	96	2400
11	15	Chittagong	89	2225	7	175	96	2400
12	15	Chittagong (City Corporation)	-	-	-	-	96	2400
13	19	Comilla	84	2100	12	300	96	2400
14	22	Cox's Bazar	83	2075	13	325	96	2400
15	30	Feni	77	1925	19	475	96	2400
16	46	Khagrachhari	83	2075	13	325	96	2400
17	51	Lakshmipur	87	2175	9	225	96	2400

2.6 Selection of Cluster (EA)

EAs do not vary much in size. So, these can be selected in a Zila with the help of simple systematic sampling without replacement. The list of EAs, obtained from the pre-census GIS mapping, is considered as the first stage sampling frame. The list of households of selected EA, obtained from the Population and Housing Census 2011, is considered as the 2nd stage sampling frame.

For selection of EAs, a random start and an interval is applied. Here the interval is the total number of EAs in the stratum divided by the number of EAs to be selected in that stratum. Random start is a random number between 1 and the calculated interval. Since Zila estimates (with segregation of rural/urban/metropolitan) will be obtained from this survey, this selection process is to be carried out independently for each stratum.

2.7 Estimating Formulae for Two Stage Cluster Sampling

Since the method of selection is the same for each stratum, the following estimating formulae will be applicable for each stratum:

Let y_{ij} be the measure of a variable Y, for j^{th} HH in i^{th} cluster or EA $(j = 1,\ 2...,\ N_{2i};\ i = 1,\ 2...,\ n_1)$. Let $Y = \sum_{i=1}^{N_1}\sum_{j=1}^{N_{2i}} y_{ij}$ be total of values of Y for all HHs in the whole strata, where N_1 is the number of EAs in the stratum and N_{2i} is the number of HH in the ith EA.

2.8 Estimate of Population Total, Y

The estimated total is given by: $\hat{Y} = \sum_{i=1}^{n_1}\sum_{j=1}^{n_{2i}} w_i y_{ij}$ ..... (3)

Where, $w_i = \frac{N_1}{n_1} \times \frac{N_{2i}}{n_{2i}}$ is the weight for the measurement of y_{ij} introduced due to two-stage cluster sampling, n_1 is the number of selected EAs in the stratum and n_{2i} is the number of HH in the ith selected EA. Considering weighted measure $z_{ij} = w_i y_{ij}$, the estimator $\hat{Y}$ in (3) can be re-written as:

$$\hat{Y} = \sum_{i=1}^{n_1}\sum_{j=1}^{n_{2i}} z_{ij} \quad \text{..... (4)}$$

This is an unbiased estimate of population total Y of variable Y. Since sampling fraction is small, the variance of $\hat{Y}$ can be estimated by the replacement formula which is as follows:

$$V(\hat{Y}) = \frac{N_1^2}{n_1}\sum_{i=1}^{n_1}\frac{\left[\hat{y}_i - \hat{Y}\right]^2}{n_1 - 1} + \frac{N_1}{n_1}\sum_{j=1}^{n_{2i}}\frac{N_{2i}^2}{n_{2i}}\frac{\left[y_{ij} - \hat{y}_i\right]^2}{n_{2i} - 1} \quad \text{..... (5)}$$

with $\hat{y}_i = \sum_{j=1}^{n_{2i}} z_{ij}$.

Standard error of $\hat{Y}$ is obtained from (5) as

$$SE(\hat{Y}) = \sqrt{V(\hat{Y})} \quad \text{..... (6)}$$

$2 \times SE(\hat{Y})$ is the error of the estimate, $\hat{Y}$, which means that population total, Y , is expected to lie within this error of the estimate in 95% cases.

2.9 Estimate of Population Mean, $\overline{Y}$

Let N be the number of households of the whole stratum, then the estimate of population mean, $\overline{Y}$ and its standard error can be obtained by simply dividing the equation (4) and (6) by N , that is

$$\hat{\overline{Y}} = \frac{1}{N}\sum_{i=1}^{n_1}\sum_{j=1}^{n_{2i}} z_{ij}$$

And $SE(\hat{\overline{Y}}) = \frac{1}{N}\sqrt{V(\hat{Y})}$.

2.10 Estimate of Population Proportion, P

Proportion is a special case of mean when the variable y is defined by:

$$y_{ij} = \begin{cases} 1 & \text{if the } (i,j)^{th} \text{ HH characteristic under consideration} \\ 0 & \text{other wise} \end{cases}$$

With this definition of variable y, the estimating formulae in (3) can be applied for the estimation of proportion.

2.11 Estimates for Other Strata

The above formulae can be used independently for each stratum.

2.12 National Estimates

National estimates can be obtained from those of 136 strata.

2.13 Estimation of Total

For estimating national total of a variable, stratum totals of the variable and their estimated variances are added separately to get the national estimated total and its estimated variance respectively.

2.14 Estimation of Mean and Proportion

The estimated mean of a variable for whole country is the weighted mean of each stratum means. Let N_h and N be the number of households of hth stratum and that of whole country respectively. Then the estimated mean of y for whole country is given by:

$$\overline{Y}_{\text{st}} = \sum_{h=1}^{L} \frac{N_h \hat{\overline{Y}}}{N}$$

Where $\hat{\overline{Y}}_h$ = estimated mean for h^{th} stratum.

The estimated variance of $\hat{\overline{Y}}_{st}$ is

$V(\hat{\overline{Y}}_{st}) = \sum \frac{N_h^2}{N^2} V(\hat{\overline{Y}}_h)$, where $V(\hat{\overline{Y}}_h)$ is estimated variance of mean for h^{th} stratum. These formulae can be used for estimating national proportion by replacing $\hat{\overline{Y}}_h$ by estimated proportion.

CHAPTER - 3

Household and Housing

3.1 Housing and Household Characteristics

This chapter includes household members, relationship with the head of household, the nature of headship, economic activities, household assets, types of housing, sources of water and fuel, etc.

3.1.2 Household: Household is the primary unit of socio-economic activities of population. It is, therefore, an important source for collection of demographic and social data. In general term, 'household' is defined as a dwelling unit where one or more persons live and eat together with a common cooking arrangement. Persons living in the same dwelling unit but having separate cooking arrangement constitute separate households. Basically, households are of different category by activities. They are dwelling, institutional and others.

3.1.3 Household Characteristics: Household concerns with members and their activities. This section contains household type, household size cross classified by number of members, age-sex distribution and other characteristics. The Sample Survey 2011 covered 167295 households which have been weighted in order to obtain the total households. The number and percentage distribution of sample and weighted households and their classification under heads of households by residence are shown in Table 3.1.

Table 3.1: Sample and Weighted Households by Residence, 2011

Residence	Sample Households			Weighted Households		
	Total	Male Headed	Female Headed	Total	Male Headed	Female Headed
Bangladesh	167295	147971	19324	31705684	27885682	3820002
Rural	133774	118425	15349	25535877	22451646	3084231
Urban	33521	29546	3975	6169807	5434036	735771
In Percentage						
Bangladesh	100.00	100.00	100.00	100.00	100.00	100.00
Rural	79.96	80.03	79.43	80.54	80.51	80.74
Urban	20.04	19.97	20.57	19.46	19.49	19.26

In Bangladesh, a total of 31.71 million households have been estimated in the survey, out of which 25.54 million are in the rural area and 6.17 million are in the urban area. Amongst these households, the male headed are 27.89 million (88%) and female headed are 3.82 million (12%). Proportion of households under male heads in rural area (80.03%) is slightly lower compared to that of urban area (80.51%). Male headed households are dominant in all over the country, with an exception in the hilly region. Each sample household represents more than 190 weighted households at the national level, 191 households in rural area and 184 households in urban area. For the purpose of comparison, households of various censuses and surveys have been presented in Table 3.2.

Table 3.2: Households by Residence, 1974- 2011

Locality	Number of Household						Household in Percent					
	*1974	1981	1991	2001	2004	2011	*1974	1981	1991	2001	2004	2011
Bangladesh	12675583	14785048	19020489	25034309	29286945	31705684	100.00	100.00	100.00	100.00	100.00	100.00
Rural	11610230	12743115	15474566	19306067	22895047	25535877	91.60	86.19	81.36	77.12	78.17	80.54
Urban	1065353	2041933	3545923	5728242	6391898	6169807	8.40	13.81	18.64	22.88	21.83	19.46

*Household and Population Census were conducted respectively in 1973 and 1974.

The proportion of rural households has declined gradually till 2001 in the country and then it has increased in 2004 and in 2011. Compared to rural households, the proportions of urban households increased, with exception only in 2004 and in 2011. The decrease of households in rural area and sharp rise in urban area up to 2001 imply the faster growth and migration of households to urban area, and also this is due to spatial expansion and change in the definition of urban area.

3.1.4 Household Size: Household size means number of members per household. It shows the structural and compositional change of households. The average size of household during 1974-2011 is shown in Table 3.3.

Table 3.3 Average Size of Household by Residence, 1974- 2011

Residence	1974	1981	1991	2001	2011	*2011
Bangladesh	5.64	5.75	5.48	4.87	4.44	4.35
Rural	5.62	5.73	5.48	4.89	4.46	4.36
Urban	5.89	5.86	5.49	4.86	4.36	4.29

* Sample survey 2011. All others are from main census data.

The household size has been decreasing gradually from 5.75 persons in 1981 to 4.44 persons in 2011. Similar declining trend has been observed in both rural and urban areas. The declining trend in household size over the long period indicates that joint family households have been breaking down into nuclear families as well as the decline in the country's fertility rate.

3.2 Household Members

Household comprises of family members, relatives and others.

3.2.1 Household Composition: Household composition refers the component of household member, structure, its compositional pattern, headship and other corresponding characteristics of household. It provides all sorts of information relating to household structure which is essential to measure and estimate the demographic and social characteristics of household. The percentage distribution of household by number of member is presented in Table 3.4.

Table 3.4 Percentage of Household by Number of Member, 1974- 2011

Person Per Household	1974	1981 Census	1991 Census	2001 Census	2011 Census	2011 Survey
Total	**100.00**	**100.00**	**100.00**	**100.00**	**100.00**	**100.00**
1	3.04	3.24	2.51	2.86	3.37	2.26
2	6.86	7.62	7.42	9.03	10.79	9.60
3	10.73	11.96	12.73	16.34	19.27	19.20
4	14.11	14.34	16.64	20.95	24.46	26.65
5	15.01	14.96	17.00	18.52	18.35	19.80
6	14.29	13.74	14.44	13.08	10.84	11.37
7	11.93	11.10	10.62	8.07	5.78	5.57
8	8.69	7.97	7.07	4.67	3.09	2.77
9	5.65	5.32	4.42	2.68	1.73	1.56
10 and above	9.69	9.75	7.15	3.80	2.31	1.22

During 1974-2011, there has been a large compositional change of household members, especially in the proportions of household distribution at the size of members 2 to 7 per household. The sum of proportions these of households was only 72.9 percent in 1974. Since then it increased gradually to 73.7 percent in 1981 and 78.9 percent in 1991 and jumps over to 86 percent in the census 2001 and in 2011 to 92.2 percent. On the other hand, the remaining proportions of households have declined during the same period (1974-2011).

Rural-urban households by male and female head and by persons are shown in Table 3.5.

Table 3.5: Population and Household with Headship by Member Size and Residence, 2011

3	3904987	14.60	1301662	1096941	204722	21.10	20.19	27.82
4	6958427	26.02	1739607	1589676	149931	28.20	29.25	20.38
5	5859718	21.91	1171944	1091407	80537	18.99	20.08	10.95
6	3784825	14.15	630804	587506	43298	10.22	10.81	5.88
7	2027161	7.58	289594	267549	22045	4.69	4.92	3.00
8	1204370	4.50	150546	136458	14089	2.44	2.51	1.91
9+	1673425	6.26	172154	158633	13522	2.79	2.92	1.84

The highest population (24.2%) lie in 4-person households and the lowest (0.5%) are in 1-person households. The same is true in rural and urban areas also. Among male headed households, 4-persons households have the highest (27.6%) percentage and 1-person households have the lowest (0.4%) percentage. Among female headed households, 3-persons households have the highest (24%) percentage and 8-persons households have the lowest (1.4%) percentage. Among male headed households in rural area, 4-persons households have the highest (27.2%) percentage and 1-person households have the lowest (0.4%) percentage. Among female headed households in rural area, 3-persons households have the highest (23.1%) percentage and 8-persons households have the lowest (1.3%) percentage. Among male headed households in urban area, 4-persons households have the highest (29.3%) percentage and 1-person households have the lowest (0.5%) percentage. Among female headed households in urban area, 3-persons households have the highest (27.8%) percentage and 9-persons and above households have the lowest (1.8%) percentage.

The head of household at the age group 50 years and above is the highest (33.9%) and lowest (0.3%) in the age group 15-19 at the national level [Table-3.6]. The same pattern is found in case of rural and urban areas, i.e. the highest is at the age group 50 years and above and the lowest is in the age group 15-19 years.

3.3 Household Activities

Household activities mean household's economic and non-economic activities. The percentage distribution of household with number of working members is shown in Table 3.7.

Table 3.7: Household and Working Member of Selected Age Group and Residence, 2011

Residence	Household	Working Household Members		
		All Ages	Aged 10+	Aged 15+
Total	31705684	107725415	16019423	91705992
Rural	25535877	86346109	13093281	73252828
Urban	6169807	21379306	2926142	18433164
In Percentage				
Total	100.00	100.00	100.00	100.00
Rural	80.54	80.15	81.73	79.88
Urban	19.46	19.85	18.27	20.12

There are 31.71 million households in the country of which 25.54 million are in rural area and only 6.17 million are in urban area. The rural households are 4.14 times of urban households. Among working household members for age 10 years and above, 81.7% are in rural area and 18.3% in urban area. Among working household members for age 15 years and above, 79.9% are in the rural area and 20.1% are in urban area.

3.4 Household and the Headship

The head of household has been defined as a person who is responsible for managing a household and is recognized as the head of the family by the members of the household. A head of household may not be the oldest member of the household or not necessarily be a male member.

3.4.1 Educational Level of the Head of Household: Educational level of the head of household, number and percentage distribution of male and female headed households are shown in Table 3.8.

Table 3.8: Household by Level of Education of the Head of Household and Residence, 2011

It is observed that the headship rate of male increases with the increase in level of education of head. The same pattern is found for both rural and urban areas of the country.

3.4.2 Reading Habit of Daily Newspaper: The daily newspaper reading habit of population by residence has been presented in Table 3.9. At the national level, the percentage of person reading newspaper increased from 4.72% in 1982 to 15.25% in 2011.

Table 3.9: Household Reported Habit of Reading Daily Newspaper by Residence, 1982-2011

Residence	Household with Reading Daily Newspaper (In percent)			
	Sample Survey 1982	Sample Survey 1991	Sample Survey,2004	Sample Survey 2011
Total	4.72	6.62	10.18	15.25
Rural	2.49	4.76	6.10	12.74
Urban	21.63	22.24	24.80	25.80

In rural area, it has increased from 2.49 percent in 1982 to 12.74 percent in 2011. In the urban area, it has increased from 21.63 percent in 1982 to 22.24 percent in 1991, 24.80 percent and 25.80 respectively in 2001 and 2011.

Breakdown ratios of households by male and female heads showing the reading habit of newspaper are presented in Table 3.10. Among the male headed households, there are 12.64 million households where at least one member reads daily newspaper and among the female headed households, there are about 1.52 million households where at least one member reads daily newspaper in the country.

Table 3.10: Household Reported Reading Daily Newspaper by Headship and Residence, 2011

Residence	Total Household	Persons Read Daily Newspaper					
		Male Headed Household			Female Headed Household		
		Total	Yes	No	Total	Yes	No

Urban	19.46	100.00	61.53	38.47	100.00	52.98	47.02

3.4.3 Listening to Radio, Watching Television and Use of Internet: There is decrease of listening radio at the national and both in urban and rural areas in 2011 compared to 2004. In 2011, 3.9% population is listening radio at the national level and in 2004, it was 20.2%. Listening to radio in rural and urban areas are 3.9% and 4.1% respectively in 2011.

Watching television has been increased more than double at the national and both in urban and rural areas in 2011 compared to 2004. In 2011, 44.8% population is watching television at the national level and in 2004, it was 20.5%. Watching television in rural and urban areas are 39.1% and 68.9% respectively in 2011.

Use of internet is very low in Bangladesh in 2011. In 2011, 1.1% population uses internet at the national level. The figures in rural and urban areas are 0.45% and 3.9% respectively in 2011.

3.5 Housing and Household Facilities

Housing is one of the basic needs for human beings. It is recognized as the fundamental right to human living on the earth by the UN agencies as one of the six criterions of the Human Basic Needs. Household facilities include water supply, electricity, health, sanitation, security and other services. All these services are considered as the fundamental requirements to households and activities.

3.5.1 Housing Characteristics: Housing structure of the country is being changed overtime over time with the economic development and uprising the levels of living of people in a country. The average housing structure shows the current status as a measure of such development and standard of living. The sample survey provides several tables on housing and its characteristics. Table 3.11 focuses on the tenancy of household and its construction material of walls and roofs.

Table 3.11: Tenancy of Household and its Construction Material of Walls and Roofs, 2011

It is seen from the Table 3.11 that at the aggregate level, 13.87% households have wall materials made of straw, 16.68% households have wall made of mud/un-burnt brick, 40.62% households have wall materials made of tin (C.I sheet), 1.66% households have wall made of wood, 26.15% households have wall made of brick/cement and 1.02% have wall materials made of other materials.

At the national level, 4.44% have roof made of straw, 82.95% have roof made of tin (C.I Sheet), 1.53% have roof made of tally, 10.71% households have roof made of brick/cement and 0.36% households have roof made of other materials.

There exists variation in the wall and roof materials by tenancy status and by urban-rural residence.

At the national level in 2011, 74% have floor with mud, 23.2% have brick/cement, 1.7% have tiles and remaining 1.1% have wood or bamboo.

3.5.2 Water Sources: Water is very essential to households for daily use. Although Bangladesh is a vast alluvial country acquainted with water vessels of innumerable rivers and canals, the problem is scarcity of pure i.e. safe drinking water. Water of the most parts of the country is polluted with various harmful extracted chemicals from mills and factories. Even surface water is always being polluted with the use of chemical fertilizers used in the agricultural fields. As a result, access to pure drinking water is now-a-days a major problem in the country. Water from tube-well/deep tube-well is comparatively safe as compared to other sources of drinking water. But, it is costly for households. To obtain a better solution for this national problem, the information related to drinking water will help the social-scientists and policy-makers for formulation of proper policies in future. The 2011 survey has provided some tables on water sources. The following Table 3.12 shows the sources of drinking water used in the households in 2011.

Table 3.12: Household by Main Source of Drinking Water and Residence, 2011

Residence	Household	Main Source of Drinking Water					
		Tap	Tube-well /Deep Tube-well	Well	Pond	River/Ditch/ Canal	Others
Total	31705684	2560503	28234360	226248	410011	120636	153926
Rural	25535877	532922	24148181	215350	389887	108954	140583
Urban	6169807	2027582	4086179	10897	20124	11681	13344
Percent							
Total	100.00	8.08	89.05	0.71	1.29	0.38	0.49
Rural	100.00	2.09	94.57	0.84	1.53	0.43	0.55
Urban	100.00	32.86	66.23	0.18	0.33	0.19	0.22

The main source of drinking water in the country is tube-well/deep tube-well. Usage of such source at the national, rural and urban areas is 89.05%, 94.57% and 66.23% respectively. Tap water is used by 8.08% households at the national level, 2.09% in the rural area and 32.86% in the urban area. The uses of other sources of drinking water are insignificant.

3.5.3 Toilet Facilities: In 2011, 61.6% households use sanitary toilets (27.8% with water seal and 33.8% without water seal) at the national level. The usage of kutcha toilet is 31.4% and the remaining 7% households have no toilet facilities who use open space.

3.5.4 Source of Lighting: The Table 3.13 shows that the types of dwelling households by source of lighting in 2011. At the national level, 56.6% households use electricity as a source of lighting followed by kerosene (39.5%), solar energy (3.3%), others (0.5%) and bio-gas (0.1%) in 2011. In the apartment house, 95.8% electricity used as a source of lighting followed by kerosene (3.5%), solar energy (0.6%) and biogas (0.1%). In the joint/barrack house, 75.9% electricity used as a source of lighting followed by kerosene (22.4%), solar energy (1.4%), others (0.2%) and biogas (0.1%). In the separate house, 49.4% electricity is used as a source of lighting followed by kerosene (46.0%), solar energy (3.9%), others (0.5%) and biogas (0.1%). The use of electricity as a source of lighting is higher than all other sources. In the urban area, the use of electricity as a source of lighting is higher than rural area for all three types of dwelling structures. In the apartment and joint/barrack house, no solar energy is being used in urban area. Similarly, bio-gas has not been used in case of joint/barrack house and separate house in urban area.

Table 3.13: Dwelling Household by Type and Source of Lighting, 2011

The following Table 3.14 presents data on various types of sources of lighting used at households in the country.

Table 3.14: Household by Source of Lighting, 1991 - 2011

(In percent)

Source of Lightning	Bangladesh			Rural			Urban		
	2011	2004	1991	2011	2004	1991	2011	2004	1991
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00
Kerosene	39.50	59.93	84.73	46.40	71.82	90.47	10.70	17.35	36.73
Electricity	56.60	39.77	14.37	48.80	27.92	8.59	88.70	82.18	62.76
Others	0.50	0.31	0.89	0.50	0.26	0.94	0.10	03.47	0.50
Solar Energy	3.30	-	-	4.00	-	-	0.50	-	-
Bio-gas	0.10	-	-	0.20	-	-	-	-	-

The following table shows that at the national level 56.6% households use electricity as a source of lighting followed by kerosene (39.5%) in 2011. In 2004 kerosene was used as major source of lighting (59.9%) followed by electricity (39.8%) and others (0.3%). In 1991, kerosene was also used as major source of lighting (84.7%) followed by electricity (14.4%) and others (0.9%). It is observed that the use of electricity as a source of lighting is increasing day by day. This is true for urban and rural areas also. The use of solar energy and bio-gas was not observed in 2004 and 1991. The use of electricity as a source of lighting is higher in urban area than rural area in 2011. It is noted that the use of solar energy and bio-gas is being used mainly in rural area.

3.5.5 Fuel for Cooking: In 2011, more than fifty percent (51.2%) households use straw/leaf/cow dung as their cooking fuel which is close to the year 2004. Use of wood has been increased in 2011 as compared to 2004. In 2011, 34.8% households use wood, 12.6% use gas/LPG, 1% use kerosene and 0.1% use bio-gas for cooking. The percentage distribution was almost same in 2004.

CHAPTER - 4

Population Characteristics

In this chapter, population composition such as size, sex, relationship with head of household, marital status, education, employment, working status etc. have been presented.

4.1 Population Composition

Population composition gives an overall pattern of population living in households, its size, sex and the nature of relationships among members under the household structure.

4.1.1 Household Population: Household is the primary source of data collection on population and social statistics for any census and survey. Members are the basic component of a household and tie with different form of relationship. Population and demographic characteristics of families are obtained largely depending on family composition or structure. Therefore, data have always been collected from households to observe the compositional changes. Overall population composition of households and relationships amongst members are shown in Table 4.1.

Table 4.1: Household Composition by Residence, 2011

Residence	Number of Household Members	Relationship of Household Members with the Head of Household (in Percent)									
		Total	Head	Spouse	Children	Parents/ Parents-in-law	Daughter/ Son-in-law	Brother/ Sister and Brother/ Sister-in-law	Grandchildren/ Great Grandchildren	Other Relative	Non-relative
Total	139252683	100.00	22.77	19.35	43.53	3.29	2.97	1.84	3.75	1.88	0.61
Rural	112510154	100.00	22.70	19.29	44.01	3.36	3.06	1.63	3.87	1.71	0.37
Urban	26742529	100.00	23.07	19.64	41.51	3.00	2.61	2.68	3.23	2.63	1.62

Among the household members, distribution of head of households in Bangladesh, rural and urban areas are 22.8%, 22.7% and 23.1% respectively in 2011. Regarding relationship with household head in Bangladesh, 19.4% are spouse, 43.5% are children, 3.3% are parents/parents-in-law,3% are daughter/son-in-law,1.8%are brother/sister and brother/sister-in-law, 3.8% are grandchildren/great grandchildren, 1.9% are other relatives and 0.6% are non-relatives. In the rural area the relationship shows that 19.3% are spouse, 44% are children, 3.4% are parents/parents-in-law, 3.1% are daughter/son-in-law, 1.6% are brother/sister and brother/sister-in-law, 3.9% are grandchildren/great grandchildren, 1.7%are other relatives and 0.4% are non-relatives. Similarly in the urban area, 19.6% are spouse, 41.5% are children, 3.0% are parents/parents-in-law, 2.6% are daughter/son-in-law, 2.7% are brother/sister and brother/sister-in-law, 3.2%are grandchildren/great grandchildren, 2.6% are other relatives and 1.6% non-relatives.

The following Table-4.2 shows the total populations aged 10 years and over under the headship of males and females.

Table 4.2: Population 10 Years and above under Male-Female Headships-2011

Residence	Population in Number			Population in Percentage		
	Population	Male Headed	Female Headed	Population	Male Headed	Female Headed
Total	107725415	97732836	9992579	100.00	90.72	9.28
Rural	86346109	78514264	7831845	100.00	90.93	9.07
Urban	21379306	19218572	2160734	100.00	89.89	10.11

At the national level, 90.72% population of 10 years and above is under male head and 9.28% is under female head. In urban area, 10.1% population of 10 years and above is female head and 89.9%

is under male head. Similarly in the rural area, 9.1 %population is under female head and 90.9% is under male headed households.

Household members aged 10 years and above and their relationships with the head of households by sex and age group are given in Table 4.3.

Among the male headed households with age 10 years and above, 28.53% are head, 27.31% are spouse, 30.63% are children, 4.32% are parents/parents-in-laws, 3.62% are son/daughter in laws, 2.36% are brother/sister in laws, 0.77% are grandchildren/great grandchildren, 1.81% are other relatives and 0.65% non-relatives. The highest percentage of head of the households observed in age 50-54 years is (55.33%) and lowest in 15-19 years (0.75%). Among female headed households, 38.23% are head, 2.56% are spouse, 41.72% are children, 3.55% are parents/parents-in-laws, 5.92% are daughter/son-in-laws, 1.62% are brother/sister/brother/sister-in-laws, 2.65% grandchildren/great grandchildren, 3.08% other relatives 0.68% are non-relatives. The highest, 79.56% are female heads in the female headed households in the age group 50-54 years.

Table 4.3: Number of Household Member 10 Years & above and Relationship with the Head of Household by Sex and Age Group - 2011

(In percent)

Age Group	Number of Household members	Members Relationship with the Head of Household, 2011

Table 4.4 shows that households having 1 member account for 16.4% male and 83.6% female at the national level. In the rural area among 1 member households, males are 14.4% and females are 85.6%. In the urban area such percentage are 29.0% and 71.0% respectively. In case of higher number of members 4 and above households, proportionally male population is more than female.

Table 4.4: Population by Household Member, Sex and Residence, 2011

Male-female composition in each age group in presented in the Table 4.5. The highest (55.26%) male was found in the age group 75-79 years and the lowest in the age group 25-29 & 20-24 years (45.23%). Among the females, the highest (54.77%) females are observed in age groups 20-24 and 25-29 years and the lowest is 44.74% in the age group 75-79 years. Almost similar pattern was observed in the rural and urban area of the country.

Sex Ratios by age and locality have been presented in Table 4.6. It is observed that the lowest sex ratio (82.58) in Bangladesh is in the age groups 20-24 years and 25-29 years in 2011 as against 80.6 in age group 20-24 years in 2004.The highest sex ratio (123.50) is in the age group 75-79 years in 2011 as against 130.80 in the same age group in 2004. In the rural area, the lowest sex ratio (82.34) is observed in the age group 25-29 years in 2011 as against 80.83 in the age group 20-24 years in 2004 and the highest sex ratio (123.35) is in the age group 75-79 years in 2011 as against 131.26 in the same age group in 2004. On the other hand in the urban area, the lowest sex ratio (75.97) is observed in the age group 20-24 years in 2011 as against 78.44 in the same age group in 2004 and

the highest (130.40) in the age group 50-54 years in 2011 as against 142.19 in the same age group in 2004. It is observed that sex ratios for national, rural and urban area are less than 100 in between 20-39 years and 80+ years which indicate that there are less number of males compared to females in those ages.

2011 (Sample Survey)	99.68	99.97	98.47

4.2 Marital Status

Over half of males and over two-fifth of females are in the “never married” category (Table 4.8). In the case of male, never married persons are 52.86% and for females it is 41.59% while male married persons are 46.37% and for females it is 50.96%. The table also shows that widow is 6.52%.

It is observed from the table that the percentages of female widowed, divorced and separated are much higher than male ones.

Table 4.8: Marital Status of Population 10 years and over by Sex & Residence - 2011

Sex	Total Population	Marital Status				
		Never Married	Married	Widowed	Divorced	Separated

Urban	100.00	46.57	49.41	3.33	0.28	0.41

It is observed from the Table 4.9 that persons married once is 96.04% and married more than once is 3.96% at the national level. In rural area, such percentages are 95.90% and 4.10% respectively. In the urban area, 96.60% are married once and 3.40% are married more than once. Among the males, single marriages at national, rural and urban area are found 93.67%, 93.41% and 94.69% respectively. Among the males, more than one marriage is 6.34% for national, 6.59% is for rural and 5.31% is in the urban area. Among females, single marriage is observed at a higher rate than males. Such rates are 97.95%, 97.89% and 98.17% for national, rural and urban area respectively. More than one marriage is found 2.05%, 2.11% and 1.83% for females in the national urban and rural area.

4.3 Education

Population 7 years over by field of education and sex has been presented in Table 4.10. It is evident from the above table that 94.3% people completed their studies in general field, 0.8% in technical/vocational and 4.9% in religious field. In rural area, 94.1% people completed their studies in general fields, 0.6% in technical/vocational and 5.3% in religious fields. In urban area, 95.3% peoples completed their studies in general field, 1.6% in technical/vocational and 3.1% in religious fields. It is

observed that rural people study religious education more than urban people. In case of general and technical/vocational education urban people is in advance than rural people.

4.4 Employment

The Table 4.11 shows that the highest (44.9%) employed population is in the age group 15-59 years, followed by 60 years and above (31.4%) and 10-14 years (6.6%) at the national level for both sex. There is no employed population in the age group below 10 years in the rural area and as well in the urban area. The highest (44.0%) employed population is seen in the age group 15-59 years followed by the age group 60 years and above (31.3%) and in the age group 10-14 years (5.7%) at the national level for both sex. In the urban area, the highest (48.4%) employed population is seen in the age group 15-59 years followed by the age group 60 years and above (31.6%) and in the age group 10-14 (10.5%) at the national level for both sex.

Working population by the age group and sex has been presented in the Table 4.12. It is observed at the national level that the lowest (2.6%) working population is seen in the age group 10-14 years and the highest (14.5%) is in the age group 25-29 years for both sex. In the rural area, the lowest (2.4%) working population is seen in the age group 10-14 years and the highest (14.4%) in the age group 25-29 years for both sex. In the urban area, the lowest (2.7%) working population is seen in the age group 65 years and above and the highest (15.1%) in the age group 25-29 years for both sex. Working population in the age 65 years and above (2.7%) is less in the urban area compared to the rural area(4.6%) and reverse scenario is found the in age group 10-14 years.

It is seen from the following Table 4.13 that economic participation of population is the lowest (6.68%) in the age group 10-14 years where it is expected and the highest (55.93%) in the age group 40-44 years in 2011. Among the male population, economic participation is the lowest (9.38%) in the age group 10-14 years and the highest (95.6%) is in the age group 35-39 years. For female population, economic participation is the lowest (3.8%) in the age group 10-14 years and the highest (13.74%) is in the age group 30-34 years. The refined activity rate was 38.5% for both sex, 68.1% for male and 5.4% for female in 2004. Similarly in 2011, the rate is 38.06% for both sex, 66.39% for male and 10.08% for female. An increasing trend of refined activity rate is observed for both sex, male and female. It is observed from the table that the crude activity rate was 27.6% for both sex with male 50.3% and female 4.0% in 2004. Similarly, the rate is 32.2% for both sex with male 54.7% and female 9.7% in 2011.

Working status of population 10 years and over have been presented in Table 4.14.It is evident from the table at the national level that working status is the lowest (2.5%) for the employer followed by family helper (4.2%), others (10.2%), self-employed-non-agriculture (25.0%), self-employed-agriculture (28.3%) and the highest for the employee (29.8%). In the rural area, working status is the lowest (2.0%) for the employer followed by family helper (4.6%), others (10.9%), employee (24.0%), self-employed-non-agriculture (24.4%) and the highest for the self-employed-agriculture (34.0%). In the urban area, working status is the lowest (2.8%) for the family helper followed by employer (4.1%), others (7.7%), self-employed-agriculture (8.0%), self-employed-non-agriculture (26.9%) and the highest for the employee (50.5%).

Working status of employed person by the level of education has been presented in the Table 4.15. Among the total employed persons, 6% employer has no schooling, the highest 35.66% employer have secondary/ higher secondary educational level and the lowest 4.22% have masters and above education level. Among the employee, the highest 30.65% have education level secondary/higher secondary and the lowest 4.54% have masters level or higher. Among the self-employed agriculture group, the highest (37.13%) group has primary education, the lowest 0.95%has masters or above education. A similar pattern is also seen in case of self-employed non agriculture group and family helpers. Among the males, the highest percentage of employer and employee has secondary/higher secondary education. Among the self-employed agriculture and non- agriculture group, the highest percentage of working population have education level primary and this is also true for family helpers and others. In case of females, the working population has primary level education except employer where the highest percentage of employer has secondary/higher secondary education level.

From Table 4.16, it is observed that the most of males and females with different employment status are married followed by never married, widow/ widower and divorce/separated. This is true for national, rural and urban area.

CHAPTER-5

Fertility

Fertility is the meansof human reproduction. The trend of population growth depends much on the level of fertility. Bangladesh has been passing through demographic transition and experiencing a decreasing trend in fertility. The chapter contains some basic measures of fertility. Different demographic rates with their trends, level and pattern by geographical and administrative break-down as well as population sub-groups are also discussed in this chapter. The Sample Vital Registration System (SVRS) of BBS is a sample survey which collects the births and deaths data. Some fertility indicators are compared between this sample surveyand SVRS.

5.1 Crude Birth Rate (CBR)

The most basic measures of fertility is the Crude Birth Rate (CBR) which is a ratio of births occurring during a year to the total mid-year population, multiplied by 1000. It shows the number of births per 1000 population per year and indicates an overall effect of fertility upon the growth of population during a year. Bangladesh showed a clear reduction in CBR during the last three decades (Table 5.1). At the national level, the CBR obtained fromthe sample surveywas 17.9whereas fromthe SVRSitwas 19.2 per thousand populations. The rate was 34.4 in 1982.

5.1.1 Urban-Rural Variation: The CBRs in rural area are always higher compared to urban area.A significant sharp reduction took place in rural area during 2004 and 2011, made the gap narrow in CBRs between rural and urban areas. This high pace in reduction of fertility in rural area is attributable to the success of family planning programme implemented by the Department of Family Planning, NGOs and the Social Marketing Company (SMC). The relatively low CBRs in urban area reflect that urban people are more educated, conscious and getting adequate facilities for birth control. The corresponding figures under SVRS-2011 are a bit higher than figures obtained from the Sample Survey 2011.

Table 5.1: Crude Birth Rate (CBR) by Residence, 1982-2011

(Per thousand Populations)

Residence	Sample Survey				SVRS
	1982	1991	2004	2011	2011
Total	34.4	28.5	22.2	17.9	19.2
Rural	35.0	30.5	22.8	17.9	20.2
Urban	29.0	24.0	20.6	17.7	17.4

SVRS: Sample Vital Registration System

5.1.2 Divisional Variation: Table 5.2 shows CBRs by division during 1991 - 2011 (survey) and in 2011 (SVRS). Rajshahi shows the highest CBR (30.4) in 1991 but in 2011 it shows the second lowest CBR (15.69), indicating that family planning programmes worked well there during the last twenty years. All divisions experienced similar declining trend. The pace in reduction in Dhaka is relatively low. However, Sylhet succeeded in reduction according to SVRS 2011.

Table 5.2: Crude Birth Rate (CBR) by Division, 1991-2011

(Per thousand Populations)

Division	1991	2004	2011	SVRS 2011
Barisal	28.0	20.7	15.2	18.7

Sylhet	27.6	28.4	20.1	18.3
Rangpur	-	-	17.9	21.5

SVRS: Sample Vital Registration System

5.1.3 Crude Birth Rateby Zila: There are sixty four districts under seven divisions in Bangladesh. For policy implications, it is necessary to have data at the district (zila) level.

There is a wide range of variations in CBRs among districts (Table 5.3). The variation can be realized by different socio-economic factors and in some cases it is difficult to explain the variations of CBR among districts. Fifty six districts have CBRsof less than 20, while eight districts haveCBRs of more than 20.Jhalokati, one of the coastal districts under Barisal Division, shows the lowest CBR (12) while Brahmanbariashows the highest rate (25.04) followed by Sunamganj (24.43) and Cox's Bazar (23.04)

Table 5.3: Crude Birth Rate (CBR) by Zila, 2011

Zila	CBR	Zila	CBR	Zila	CBR	Zila	CBR
Barguna	12.95	Rangamati	17.06	Sherpur	19.90	ChapaiNawabganj	17.72

Cox's Bazar	23.04	Narayanganj	16.01	Satkhira	13.75	Thakurgaon	17.19
Feni	17.88	Narsingdi	19.63	Bogra	14.74	Habiganj	19.84
Khagrachhari	17.51	Netrokonaq	20.87	Joypurhat	14.10	Moulvibazar	17.30
Kakshmipur	20.24	Rajbari	16.30	Naogaon	14.63	Sunamganj	24.43
Noakhali	15.45	Shariatpur	17.47	Natore	14.07	Sylhet	20.21

5.2 Age-specific Fertility Rate (ASFR)

Age-specific fertility rate (ASFR) is one of the most important and useful tool in the analysis of current fertility of women in the reproductive age. It is considered to be the basis for calculation of other important measures of fertility. ASFR is a ratio of the number of births born to women at specific age-group to the number of women of same age-group in child-bearing ages (15-49 years) at the middle of the year, usually multiplied by 1000.

Age specific fertility rate at the national level obtained from the sample survey 2011 varies with the ASFR obtained from the SVRS (Table 5.4). For the age group15-19 years, ASFR obtained from sample surveywas 46 per thousand women compared to 65 in the SVRS. This variation may be due to age misreporting or recall lapse of the women in this age group.The age specific fertility rateof other age group compares well between the sample survey 2011 and the SVRS 2011 except age group 30-34. For age group 30-34 the ASFRobtained from the sample census was 70 per thousandwomen compared to 62 per thousand women from the SVRS.

5.2.1 Urban-Rural Variation: The age-specific fertility rates computed through the sample survey and the SVRS are given in Table 5.4. The age-specific fertility rates have been decreasing for all age groups as well as in both the rural and urban areas. The urban rates are lower than those of rural area in all years specified here for all the age-groups (15-49). The ASFR rises as age (age-group) goes up and after a certain point it tends decline. Generally, adecreasing trend of ASFRis observed from 1982 to 2011in all the age groups among the sample surveys.

Table 5.4: Age Specific Fertility Rate (ASFR) by Residence, 1982-2011

Year	Residence	Age Specific Fertility Rate (ASFR) per 1000 women						
		15-19	20-24	25-29	30-34	35-39	40-44	45-49

*SVRS (Sample Vital Registration System)

5.3 Total Fertility Rate (TFR)

Total Fertility Rate (TFR) represents an average number of childrenborn per woman in the reproductive ages(15-49 years) ina particular period, usually a year. It is a summary measure of the age-specific fertility rates. The TFR per woman by locality during 1982 to 2011 has been given in Table 5.5. The TFR was estimated at 5.24 births per woman in 1982, which declinedto 2.10 in 2011. Results from different years showed a consistent and gradual declining trend over the period 1982-2011. During 1982-2011,there was a reduction of about 3.14 children per woman.

Total Marital Fertility Rate has been decreased at the national and both in urban and rural areas in 2011 compared to 2004. In 2011, the rate is 2.77 at the national level. The figures for the rural and urban areas are 2.81 and 2.61 respectively in 2011.

5.3.1 Urban-Rural Variation: The TFRs estimated in 2011 from the data obtained from the sample survey and the SVRS are very close (Table-5.5). TFR was lower in urban area compared to rural area. Since 1982, the TFR had been decreasing in both the urban and the rural areas. It is interesting that, TFRs obtained by SVRS are higher in case of total and in rural areabut lower in urban area compared to corresponding figures computed through the sample census in 2011

Table 5.5: Total Fertility Rates (TFR) by Residence, 1982 - 2011

Year	Residence		
	Total	Rural	Urban
1982	5.24	5.26	4.19
1991	3.67	3.82	2.77
2004	2.63	2.78	2.25
2011	2.10	2.16	1.86
2011*	2.11	2.31	1.78

*SVRS: Sample Vital Registration System

5.3.2 Divisional Variation

Data on TFR by administrative divisions of the country are given in the Table 5.6. The table shows the divisional variation and trend of TFR over time. There exists moderate variation in TFR among the divisions. The TFR has been gradually decreasing in the urban and rural areas of all the administrative divisions. The highest TFR was observed in Sylhet division followed by Chittagong, Rangpur, Dhaka, Barisal, Khulna and the lowest is in Rajshahi division.

Table 5.6: Total Fertility Rate (TFR)per Woman by Division, 1991-2011

Division	1991			2004			2011		
	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
Barisal	3.67	3.82	2.00	2.65	2.67	2.51	1.94	1.95	1.92
Chittagong	3.75	3.85	2.14	2.82	2.99	2.29	2.37	2.52	1.84
Dhaka	3.62	3.88	2.16	2.62	2.95	2.07	2.08	2.16	1.91
Khulna	3.68	3.72	2.04	2.38	2.41	2.34	1.85	1.86	1.78
Rajshahi	3.62	3.83	2.92	2.38	2.44	2.00	1.78	1.84	1.49
Sylhet	-	-	-	3.82	3.91	2.95	2.73	2.86	1.97
Rangpur	-	-	-	-	-	-	2.17	2.19	2.06

5.3.3 TFR by Education of Women: The TFR was the highest among the women with no-education, and was the lowest among the women having graduate level education (Table 5.7), which shows that education is a significant factor in fertility reduction.

It is evident from the table that TFR is gradually decreasing from Junior Secondary to Graduation level of education from 1991 to 2011. A decreasing trend was observed from 1991-2004 in all levels of education. TFRs have increased from 2004 to 2011 in case of the women who passed Secondary/Higher Secondary and Graduate levels.

Table 5.7: Total Fertility Rate (TFR) by Education of Women, 1991-2011

Year	Total	Pre-primary	Primary	Junior Secondary	Secondary/Higher Secondary	Graduate	Masters and Above
1991	3.67	4.31	4.06	3.67	3.43	3.13	3.63
2004	2.60	2.95	2.90	2.47	1.81	1.61	1.79
2011	2.10	2.27	2.26	2.26	1.88	1.63	1.72

5.4 Gross Reproduction Rate (GRR) and Net Reproduction Rate (NRR)

Gross reproduction rate has been decreased at the national and both in urban and rural areas in 2011 compared to 2004. In 2011, the GRR is 1.08 at the national level. The figures for the rural and urban areas are 1.12 and 1.02 respectively in 2011.

Net Reproduction Rate is the average number of daughters per woman during her child bearing age conforming ASFR and mortality rates. In 2011, the NRR is close to 1, the replacement level of fertility. The exact NRRs at the national, in rural and in urban areas are 1.05, 1.09 and 0.93 respectively in 2011. The rate has been decreased from 2004. In 2004, the rate was 1.18 at the national level.

5.5 General Fertility Rate (GFR)

General Fertility Rate (GFR) is computed as a ratio of the number of births during a year to the mid-year population of women at child-bearing ages, usually multiplied by 1000.The GFRs obtained from the SVRS 2011 are lower compared to corresponding figures obtained from the sample survey in 2011 but

the reverse picturewas observed in 1991 (Table 5.8).The general fertility rate obtained from the sample surveywas 82 per thousand compared to 70 per thousand from the SVRS

5.5.1 Urban-Rural Variation: The GFRs are considerably lower in urban area than in rural area. It may be due to the fact that the urban people are more educated and conscious about the demerits of higher level of fertility.The GFR obtained fromthe sample survey 2011 in rural and urban areas are 84 and 78 respectively compared to 77 and 60 from the SVRS in the same yearat the national level(Table 5.8).

Table 5.8: General Fertility Rate (GFR) by Residence, 1991-2011

Year	National	Rural	Urban
1991	132	138	87
1991*	145	152	96
2004	87	92	72
2004*	83	88	63
2011	82	84	78
2011*	70	77	60

*SVRS: Sample Vital Registration System

5.6 Children Ever Born Per Woman

Children ever born per woman of the reproductive ageshave been presented in the Table-5.9.Compared to 2004, the number of children ever born per woman was lower in 2011 in all reproductive age groups at the national level and in rural area. This is expected that the fertility would decline in between 2004-2011. Interestingly, the number of children ever born in urban area has increased in 2011 compared to 2004.

Table-5.9: Children Ever Born Per Women by Age and Locality, 2004 and 2011

Age group of mother	National			Rural			Urban		
	Both sex	Male	Female	Both sex	Male	Female	Both sex	Male	Female
1	2	3	4	5	6	7	8	9	10

5.7 Assistance at Delivery

Assistance at delivery by skilled and unskilled personnel has been presented in Table 5.10.It is apparent from the table that delivery by Skilled Birth Attendant was accounted for 41.3% (highest) followed by Doctor (21.1%), Unskilled Birth Attendant (20.6%),Nurse/Health Worker (11.5%) and others (5.6%) in the national level. It is seen that 72.6% delivery were assisted by Doctor, Nurse/HW and SBA in the national

level. The highest percentage of delivery(52.6%) is assisted by Skilled Birth Attendant in the age group 40-44. In rural area, delivery by Skilled Birth Attendant was accounted for 44.1% (highest) followed by Unskilled Birth Attendant (22.7%), Doctor (17.1%), Nurse/Health Worker (10.1%) and others (6.1%). It is seen that 71.2% delivery were assisted by Doctor, Nurse/HW and SBA in the rural area. The highest percentage of delivery (55.1%) was assisted by Skilled Birth Attendant in the age group 40-44 in the rural area. In urban area delivery by Doctor was accounted for 39.0% (highest) followed by Skilled Birth Attendant (29.0%),Nurse/Health Worker (17.6%), Unskilled Birth Attendant (11.0%) and others (3.4%). It is seen that 85.6% delivery were assisted by Doctor, Nurse/HW and SBA in the urban area. The highest percentage of delivery (49.1%) was assisted by Doctor in the age group 30-34. It can be said that urban people are more conscious than rural people in case of delivery done by skilled persons like Doctor and Nurse.

Table 5.10: Women Aged 15 - 49 YearsWho Gave Birth in the last 12 Months by Age Group, Residence and Persons Assisted in Delivery, 2011

5.7.1 Assistance at Delivery by Level of Education of Women: Assistance at delivery by level of education of reproductive women has been presented in the Table-5.11. It is observed from the table that births attended by skill personnel increase with the increase in educational level of women of reproductive ages.

The highest percentage of delivery (94.3%) is assisted by Doctor, Nurse/HW and SBAin the education level masters and above. In rural area, delivery by Skilled Birth Attendant was accounted for 44.1%

(highest) followed by Unskilled Birth Attendant (22.7%), Doctor (17.0%), Nurse/Health Worker (10.1%) and others (6.1%). It is seen that 71.2% delivery were assisted by Doctor, Nurse/HW and SBA in the rural area. The highest percentage of delivery (82.2%) is assisted by Doctor, Nurse/HW and SBAin the education level masters and above. In urban area, delivery by Doctor was accounted for 38.9% (highest) followed by Skilled Birth Attendant (29.02%), Nurse/Health Worker (17.6%), Unskilled Birth Attendant (11.0%) and others (3.4%). It is seen that 85.6% delivery were assisted by Doctor, Nurse/HW and SBAin the urban area. The highest percentage of delivery (100%) was assisted by Doctor, Nurse/HW and SBAin the education level masters and above. It can be said that urban educated people are more conscious than rural people in case of delivery done by skilled persons like Doctor and Nurse. It is interesting that women having education level masters and above do not go to Unskilled Birth Attendant or other persons for their deliveries in the urban area.

Table 5.11: Level of Education of Women Aged 15 - 49 Years Who Gave Birth in the Last 12 Months by Persons Assisted in Delivery and Residence, 2011

We have seen from the previous table that delivery by Skilled Birth Attendant are accounted for 41.3% (highest) followed by Doctor (21.1%), Unskilled Birth Attendant (20.6%), Nurse/Health Worker (11.5%) and others (5.6%) in the national level. It is seen that 73.9% deliveries are assisted by Doctor, Nurse/HW and SBAat the national level.

5.8 Place of Delivery

It is seen from the Table-5.12that delivery at home is accounted for 70.7% (highest) followed by Private Hospital/Health Care Center (13.5%), Government Hospital/Health Clinic (13.4%) andNGO Health Care Clinic (2.4%) at the national level. The high rate of delivery (81.2%) at home is observed in the age group 40-44 years. In the rural area,delivery at home is accounted for 75.8% (highest) followed by Government Hospital/Health Clinic (11.8%), Private Hospital/Health Care Center (10.7%) andNGO Health Care Clinic (1.6%). The high rate of delivery (86.20%) at home is observed in the age group 45 - 49 years in the rural area. In the urban area,delivery at home is accounted for 47.9% (highest) followed by Private Hospital/Health Care Center (25.8%), Government Hospital/Health Clinic (20.5%) and NGO Health Care Clinic (5.8%). The high rate of delivery (64.6%) at home is observed in the age group 40 - 44 years. It is clear from the table that urban people are more conscious than rural people in choosing the better place of delivery such as hospital and clinic. The above table reveals that still delivery at home is predominant both in rural and urban areas.

CHAPTER - 6

Mortality

Generally, a population increases by births and decreases by deaths. The study of fertility and mortality has, therefore, been one of the primary objectives in the field of demography for a long time. Mortality rates are important indicators reflecting the health situation of the population of a country. Mortality has been decreasing in the most of the countries of the world along with the development of public health and improvement of living conditions in modern ages. Mortality situation could be observed from the available data. Patterns, levels and trends indicate the current mortality situation and extent of variation over time. This chapter provides the important indices to study the levels and trends of mortality situation in Bangladesh. These are crude death rate, age specific death rate, infant mortality rate, child death rate.

6.1 Crude Death Rate (CDR)

The most basic form of measure of mortality is the Crude Death Rate (CDR) which is the ratio of the number of deaths occurring during a year to the population at the middle of the year. The rate, preferably known as general death rate or simply death rate, is usually multiplied by 1000, thus indicating the number of deaths per 1000 mid-year population.

6.1.1 Urban-Rural Variation: Urban-rural variations in CDR by sex is presented in Table 6.1. The CDR has decreased in both urban and rural areas, among both males and females during the inter-censal period. There exists urban-rural differential in CDR between 2004 and 2011 sample survey. The CDRs in urban area are higher than in the rural area. The CDRs among males are higher than females in the most of the cases.

Table 6.1: Crude Death Rate (CDR) by Sex and Residence, 1982-2011

Year	National			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female
1982*	12.2	12.3	12.1	12.8	12.7	12.8	6.9	7.6	8.1

2011*	5.5	-	-	5.8	-	-	4.8	-	-

* SVRS

6.1.2 Regional Variation: Regional variations in CDR by sex and residence are presented in Table 6.2. The CDR for both sexes is the highest in Chittagong Division followed by Barisal Division and Khulna Division and lowest in Rajshahi Division, followed by Sylhet Division and Rangpur Division. In most divisions, the CDRs are higher among males than females. Also, the CDR is higher in urban area than rural area except in Rangpur Division. The same trend is also seen among urban and rural males. Also, the CDR among urban females is greater than rural females, except in Barisal Division and Rangpur Division.

Table 6.2: Crude Death Rate (CDR) by Sex, Division and Residence, 2011

Division	Total			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female
Barisal	5.3	5.5	5.1	5.3	5.3	5.3	5.6	7.2	4.0

Rangpur	4.4	5.3	3.8	4.5	5.3	3.7	3.6	5.1	2.1
Total	**4.8**	**5.5**	**4.1**	**4.7**	**5.4**	**4.1**	**5.1**	**5.9**	**4.3**

6.2. Age Specific Death Rate (ASDR)

Age specific death rate (ASDR) is the ratio of the number of deaths by age of the decedent to the mid-year population in each age interval, usually multiplied by 1000. It shows the mortality pattern between age groups.

The ASDR is highest in the 80+ age group, followed by 75-79 and 0 age groups and the lowest is in the 10-14 age group, followed by 5-9 years age groups and at the age 4 years (Table 6.3).

Table 6.3: Age Specific Death Rate (ASDR) by Sex and Residence, 2011

(Per thousand Populations)

Age Group	National			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female
0	37.3	45.4	29.1	37.9	45.6	29.8	35.0	44.2	26.3
1	8.1	9.5	6.7	8.2	10.1	6.2	7.8	6.9	8.8

15-19	1.2	1.3	1.1	1.2	1.1	1.3	1.3	1.9	0.6
20-24	1.1	1.1	1.1	1.0	1.1	0.9	1.5	1.4	1.7
25-29	1.0	1.2	1.0	1.1	1.2	1.0	0.9	1.2	0.7
30-34	1.2	1.3	1.0	1.2	1.3	1.1	1.1	1.4	0.9
35-39	1.7	1.9	1.6	1.6	1.8	1.4	2.2	2.1	2.2
40-44	2.5	2.9	2.1	2.5	3.1	1.8	2.6	2.1	3.3
45-49	3.8	4.1	3.5	3.4	3.3	3.6	5.2	6.9	3.1
50-54	4.8	6.4	3.1	4.7	6.1	3.1	5.6	7.7	2.9
55-59	8.3	10.2	6.3	7.2	8.7	5.8	12.8	15.9	9.0
60-64	12.1	16.2	7.6	11.9	16.1	7.5	12.9	16.7	8.1
65-69	17.1	19.5	14.6	15.9	19.2	12.6	23.5	21.4	25.8
70-74	32.0	34.0	29.7	30.1	30.9	29.1	43.1	51.2	33.2
75 -79	48.4	49.9	46.6	44.5	47.5	40.7	73.0	64.5	83.6
80+	107.7	107.4	107.9	101.6	102.1	101.1	145.4	142.6	147.6
Total	**4.8**	**5.5**	**4.1**	**4.7**	**5.4**	**4.1**	**5.1**	**5.9**	**4.3**

Table 6.3 shows that the ASDR in '0' age group is much higher than in the age group of 1-4. It is clear that the risk of dying in the age less than one year or '0' is higher than any other group individually except the age groups of 75 -79 and 80+ years. The higher the age group the higher is the risk of dying. The ASDR is higher for both sexes in urban area than rural area in most of the age groups. ASDRs for males are higher than that of females in most of the age groups in the urban area. The same scenario is observed for both males and females in rural area.

6.3 Infant Mortality Rate (IMR)

Infant Mortality Rate (IMR) is an important indicator of the infants under 1 year of age. The IMR is usually computed as the ratio of deaths of live-born children below one year of age, that is, who have not yet reached their first birthday (infant deaths) for a calendar year to the number of live-births during the same year. The rate is generally expressed by 1000 live births.

6.3.1 Urban-Rural Variation: The IMR has been decreasing over time very sharply due to the improvement of health care facilities day by day. If we compare the sample survey findings with the SVRS, we see the same decreasing trend. It is also seen that Also, the IMR is higher among males than females (Table 6.4).

Table 6.4: Infant Mortality Rate (IMR) by Sex and Residence, 1981-2011

Year	National			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female

6.4 Child Death Rate (ChDR)

Child Death Rate (ChDR) is the ratio of number of deaths, from all causes, to children between ages 1 and 4 for calendar year per 1000 children in the same age group.

6.4.1 Urban-Rural Variation: During the intercensal period 1991-2011 the ChDR declinec by 80% for both sexes, 77% for male and 84% for female at the national level. In rural area, the ChDR has declined by 81% for both sexes, 77% for male and 85% for female. In urban area, the declines are 67% for both sexes, 68% for male and 67% for female (Table 6.5). Different types of vaccines, basic medical and maternal care and nutritional support provided by the government may have helped in reducing the ChDR in Bangladesh.

Table 6.5: Child Death Rate (ChDR) by Sex and Residence, 1991-2011

Year	National			Rural			Urban		
	Both Sex	Male	Female	Both Sex	Male	Female	Both Sex	Male	Female

CHAPTER - 7

Migration

Migration is the most prevailing phenomenon which takes place throughout the world for various pull and push factors, such as employment, education, river erosion, natural calamity etc. Migration has been defined as the movement of person who changes his/her place of birth or place of residence for a period of six months or more. Six months reference period is considered for migrants, except those who change their place of birth or residence for marriage. For the cause of marriage, there is no reference time. There are two types of migration-internal and international. Internal migration takes place within the country, i.e. the migrant does not cross the international boundary. In case of permanent migration, the migrant leaves the place of birth once and stays at the place of destination. On the other hand, repeated change of residence may take place in case of temporary migration. Migration is an important component of growth and re-distribution of population. The analysis of data on migration is essential for socio-economic planning of the country.

7.1 Trends in Life Time Internal Migration

Data on life time internal migrants of Bangladesh were collected considering their places of birth and places of locality at the time of enumeration.

Life time internal migration of Bangladesh, based on censuses has been presented in the Table 7.1. The lifetime internal migration rates show an increasing trend during 1974 to 1991. In 2004, the rate slightly declined compared to 1991 but in 2011 the rate again slightly increased by 0.48 percentage point compared to 2004.

Table 7.1: Lifetime Internal Migration of Bangladesh, 1974-2011

Year	Population '000	Migrants in '000'	Percentage (%)
1974	70718	2461	3.44
1981	88730	6560	7.39
1991	111455	11647	10.02
2004	136362	12734	9.34
2011	139252	13678	9.82

Table 7.2: Lifetime Net Migrants by Division, 1974-2011

Year	Barisal	Chittagong	Dhaka	Khulna	Rajshahi	Sylhet	Rangpur
1974	(-)199018	(-)345155	(+)117757	(+)286745	(+)139671	NA	NA
1981	(-)104802	(-)378570	(+)261827	(-)48369	(+)12780	NA	NA
1991	(-)481000	(-)285000	(+)642000	(-)298000	(+)422000	NA	NA
2004	(-)1549076	(-)1369191	(+)3239114	(+)614	(-)453294	(+)131833	NA
2011	(-)343108	(-)255389	(+)1291313	(-)184999	(-)204908	(-)11232	(-)291677

Note: (-) denotes more out migrants and (+) denotes more in migrants. NA denotes data not available due to non-existence of divisions in the years under reference.

Life time net migration by divisions of the country has been presented in the Table 7.2. A large number of people have been migrating to Dhaka Division every year. A huge migration took place in 2004 in Dhaka division compared to other years. A considerable number of people migrated to Rajshahi Division during 1974-1991 but on the contrary, a large number of people migrated from Rajshahi Division to other places in 2011 and in 2004. It is observed that a large number of people have been migrating from Barisal and Chittagong divisions to other places since 1974. People migrated to Khulna Division in 1974 and 2004, but a large migration took place from Khulna division to other areas in 1981, 1991 and 2011. In 2011, net migration is positive only in Dhaka division, i.e. in-migration is higher here than out migration who are coming from all other divisions. Net migrations are negatives in all other five divisions in 2011.

7.2 Migration by Directions

Table 7.3: Internal Migration by Direction and Duration (Years) of Migration, 2004-2011

(% of Population)

Direction	Duration of Migration (years)											
	1991				2004				2011			
	1-10	11-20	20+	Total	1-10	11-20	20+	Total	1-10	11-20	20+	Total
1	2	3	4	5	6	7	8	9	10	11	12	13
Rural to Rural	0.96	0.68	1.65	3.42	0.43	0.46	2.08	2.99	2.64	1.19	1.25	5.26
Urban to Rural	0.13	0.05	0.89	1.10	0.09	0.08	0.20	0.38	0.24	0.10	0.09	0.46
Rural in-migration	**1.09**	**0.73**	**2.54**	**4.52**	**0.52**	**0.54**	**2.28**	**3.37**	**2.88**	**1.29**	**1.34**	**5.72**
Rural to Urban	10.71	5.67	33.46	51.79	1.04	1.09	2.59	4.79	11.28	5.51	4.66	22.29
Urban to Urban	1.70	0.82	1.54	4.36	3.46	5.03	17.78	26.41	2.34	1.02	0.88	4.44
Urban in-Migration	**12.41**	**6.49**	**35.0**	**56.15**	**4.50**	**6.12**	**20.37**	**31.20**	**13.62**	**6.53**	**5.54**	**26.73**
Total Migration	2.30	1.56	6.01	10.02	1.37	1.73	6.16	9.34	16.61	7.87	7.07	9.82

Among rural population, 4.52% in 1991, 3.37% in 2004 and 5.72% in 2011 migrated within the country. In urban area, 56.15% in 1991, 31.20% in 2004 and 26.73% in 2011 has migrated internally (Table 7.3).

Table 7.4: Internal Migration Rate per 1000 Population by Direction, 1991-2011

Direction	Year		
	1991	2004	2011
Rural Migration	**45.2**	**33.7**	**57.2**
Rural to Rural	34.2	29.9	52.6
Urban to Rural	11.0	3.8	4.6
Urban Migration	**561.5**	**312.0**	**267.3**
Urban to Urban	43.6	47.9	44.4
Rural to Urban	517.9	264.1	222.9

Internal migration from rural area to rural area per thousand populations was 52.6 and from urban to rural area was 4.6 per thousand. On the other hand urban to urban migration per thousand populations was 44.4 and rural to urban was 222.9 per thousand population (Table 7.4).

7.3 Age Composition of Internal Migrants

Table 7.5: Age Distribution of Migrant and Population, 1991-2011

(In Percent)

Age Group	Migrant			Population		
	1991	2004	2011	1991	2004	2011
0 - 4	8.37	5.74	4.40	15.80	12.40	10.30
5 - 9	10.69	7.73	5.80	16.65	13.45	12.40
10-14	10.67	9.39	6.50	12.21	12.35	11.50
15-19	8.34	10.62	8.20	8.62	9.79	9.10
20-24	9.78	11.37	11.70	8.41	8.46	8.70
25-29	10.22	10.70	13.90	8.58	8.31	9.10
30-34	8.91	10.14	10.40	6.20	7.47	7.10
35-39	8.56	8.01	10.10	5.59	7.03	6.90
40-44	6.45	5.98	7.60	4.33	5.54	5.70
45-49	5.10	4.47	6.40	3.30	4.41	4.90
50-54	4.11	2.69	4.70	2.98	3.41	4.00
55-59	2.56	2.13	3.30	1.88	2.28	2.80
60-64	2.53	1.25	2.70	2.19	2.02	2.80
65-69	1.35	0.90	1.50	1.13	1.19	1.60
70+	2.38	1.82	2.70	2.13	1.91	3.20

The percentages of migrants are relatively higher in the age groups 20-24 years to 35-39 years in 2011. Employment may be the principal cause of migration of these working age peoples (Table 7.5).

Table 7.6: Percentage Distribution of Internal Migrants along with their Sex-Ratios by Zila, 1991, 2004 and 2011

Zila	Migrant (%)			Sex Ratio			Zila	Migrant (%)			Sex Ratio

Tangail	0.83	2.09	1.81	66.9	65.86	29.9							
Dhaka Division	-	17.26	19.22	-	92.48	84.0							

Barisal division has the lowest number of migrants (3.31%) and Dhaka division has the highest number of migrants (19.22%) in 2011 followed by Khulna, Chittagong, Sylhet, Rajshahi and Rangpur divisions (Table 7.7). The sex ratios of the migrants of different divisions and zilas for 1991, 2004 and 2011 can also be seen in the Table 7.7. In 2011, the highest sex ratio was in Dhaka division (84), followed by Chittagong, Sylhet, Rajshahi, Rangpur and Khulna division and the lowest in Barisal division (35.6).

Among the districts in 2011, Bhola has the lowest number of migrants (1.00%) followed by Cox's Bazar (1.33%) whereas Dhaka zila has the highest number of migrants (51.08%) followed by Gazipur (40.95%). The highest sex ratio of migrants in 2011 is in Rangamati zila (101.6) followed by Dhaka, Chittagong and Sylhet zilas. The lowest sex ratio is in Gopalganj zila (17.1). It is evident from the table

that the sex ratios of the migrants have been mostly decreasing trend in the majority of divisions and zilas since 1991. The in-migration rate in Bangladesh is 9.82% and the sex ratio of the migrants is 72.1 in 2011.

7.4 Marital Status of Migrants

The marital status of migrants shows that for both sexes 27.1% are never married, 67.92% are married, 4.1% are widow, 0.3% are divorced and 0.6% are separated (Table 7.7).

For males, 35.0% are never married 63.9% are married, 0.7% are widowed, 0.1% are divorced and 0.3% are separated.

For females 21.3% are never married, 70.8% are married, 6.5% are widowed, 0.5% are divorced and 0.8% are separated. The data shows that higher percentage of "never married" males migrated (35.1%) compared to the females (21.3%) by considering irrespective of ages.

7.5 Activity status of migrants

In 2011, the migrants who are working in the non-agriculture sector account for the over two-fifths (41.8%), followed by household work (39.7%) and only 2.3% in agriculture (Table 7.8). In rural area 47.6% migrants for both sexes are engaged in household work and only 4.1% migrant of both sex are engaged in agricultural activities.

About three-quarters (73.1%) of male migrants in urban area are engaged in the non-agricultural sector compared to three-fifth (61.0%) of male migrants in the same sector in rural area. Among the female migrants, 28.6% in urban area and 17.4% in rural area are engaged in the non-agricultural sector. Two-thirds (67.4%) of female migrants in the rural area are engaged in household works compared to 54.1% in the same sector in urban area.

Appendix -I

Acronyms

BBS – Bangladesh Bureau of Statistics

BIDS – Bangladesh Institute of Development Studies

EA – Enumeration Area

EU – European Union

GIS – Geographical Information System

HH – Household

HYV – High Yielding Variety

ICR – Intelligent Character Recognition

iCADE- Integrated Computer Assisted Data Entry

KFI – Key From Image

OCR – Optical Character Reader

OMR – Optical Mark Reader

OUA – Other Urban Area

PEC – Post Enumeration Check

PSA – Paurashava

QA – Quality Assurance

SA – Supervisors Area

SID – Statistics and Informatics Division

TIFF – Tagged Image File Format

UHQ – Upazila Headquarters

UNFPA- United Nations Population Fund

USAID- U.S. Agency for International Development

**Hot- deck – Hot deck imputations is a method for handling missing data in which each missing value is replaced with an observed response from a “similar” unit.

**Cold- deck – This imputation, by contrast, selects missing data from another dataset.

Bangladesh Bureau of Statistics (CONFIDENTIAL)

Bangladesh Bureau of Statistics
Sample Census 2011

Module 1: Identification and Household Summary

1a. Household Address:

1b. Continuation pages ☐☐ pg. ☐☐

2a. Sample Census Household Number ☐☐

2b. Census Household Number ☐☐☐

3. Household members	Total	Male	Female
a. Members usually living in the HH			
b. Members usually living in the HH but currently absent			
c. Former members of the HH now living abroad			
d. Visitors			
e. Members of the HH that returned from abroad in the 5 past years			

Module 2: Housing related

4. Type of dwelling?	5. Construction material of walls?	6. Construction material of roof?	7. Construction material of floor?	8. Dwelling a. Total number of rooms	8. Dwelling b. Number of rooms used for sleeping	9. Is it a slum dwelling? Yes	9. Is it a slum dwelling? No
☐ Separate	☐ Straw/Bamboo/ Polythene/Plastic/ Canvas	☐ Straw/Bamboo/ Polythene/Plastic/ Canvas	☐ Mud	☐☐	☐☐	☐	☐
☐ Apartment	☐ Mud/Unburnt brick	☐ Tin (CI sheet)	☐ Wood/Bamboo				
☐ Joint/Barrack house	☐ Tin (CI Sheet)	☐ Tally	☐ Brick/Cement				
	☐ Wood	☐ Brick- Cement	☐ Mosaic/Tiles				
	☐ Brick-Cement	☐ Others	☐ Others				
	☐ Others						

Module 3: Household Related

10. Does your hh belong to an ethnic community? Yes	10. No	11. Tenancy of house (1=Owned 2=Rented 3=Rent free)	12. a. Main source of drinking water: Tap	Tubewell/ Deep tubewell	Well	Pond	River/ditch/ Canal	Others	12. b. Does the household drink boiled/ bottled/ filtered water? Yes	No	12. c. Distance to source of water: Inside dwelling	Within 200 meters	More than 200 meters
☐	☐		☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

13. Type of toilet: Sanitary with water seal	Sanitary without water seal	Non-sanitary/ Kutcha	Open space	14. Disposal of solid waste: Managed dustbin	Unmanaged dump site	Bury/inside pit	Burn	15. Source of light: Electricity	Solar energy	Kerosene	Bio-gas	Others
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

16. Cooking fuel: Wood	Kerosene	Gas/LPG	Electricity	Straw/leaf/dried cowdung	Bio-gas	17. How many male and female members of the household read newspaper, listen to radio, watch television or use internet? a. Read newspaper Male	Female	b. Listen to radio Male	Female	c. Watch televison Male	Female	d. Use internet Male	Female
☐	☐	☐	☐	☐	☐								

Does any member of the HH own a house/land?

18a. House? Yes	18a. No	18b. If yes, how many own house? Male	Female	19a. Land? Yes	19a. No	19b. If yes, how many own land? Male	Female
☐	☐			☐	☐		

If no, skip to → Q.19a; If no, skip to → Q.20

20. Does this household own the following? (Ask question for each item. If the answer is yes put cross on 'yes' box else put cross on 'no' box)

Boat Yes	Boat No	Bull/ Buffalo Cart Yes	Bull/ Buffalo Cart No	Push Cart/ Rickshaw Van Yes	Push Cart/ Rickshaw Van No	Rickshaw Yes	Rickshaw No	Bicycle Yes	Bicycle No	Motorcycle Yes	Motorcycle No	Motor Car/ Bus/ Truck Yes	Motor Car/ Bus/ Truck No	Scooter/ CNG/Auto rickshaw Yes	Scooter/ CNG/Auto rickshaw No	Telephone Yes	Telephone No	Mobile Yes	Mobile No	Sewing Machine Yes	Sewing Machine No	Television/ Radio/ Transistor Yes	Television/ Radio/ Transistor No	Dish Antenna Yes	Dish Antenna No	Computer Yes	Computer No	Freezer/ Deep Freezer Yes	Freezer/ Deep Freezer No
